FLASH!! PRICES DOWN!

The Greatest Price Reduction in Our History on Peach and Apple Trees

● We come to the grower this fall with the finest lot of fruit trees we have offered in many years. Our new low prices mean a real saving to you. Our trees a real investment for every planter. **BUY NOW** — Our new **LOW PRICES** effective on all orders received up to January 1st, 1939.

Some Recognized Facts About Bountiful Ridge Nursery Stock

1. VARIETIES

We offer the planters one of the most practical and complete listings of fruits available. Our many years of direct contact with the commercial growers in all sections of the country enables us to at once recognize the commercial possibilities of any varieties as they come to our attention. Our field men are constantly searching for new and improved types of fruits which have definite merit. We know the importance of proper selection of varieties and locations for dependable orchards. You will find our descriptions authentic, simple, and definite. Large fruit growers tell us, "We find your variety listings of apple and peach trees the most complete, your descriptions the most dependable, of any nursery catalog we receive." We invite your inquiries and will endeavor to give detailed information about any stock we list.

2. OUR LOCATION

The Eastern Shore of Maryland is today recognized by many eminent horticultural authorities as one of the most favorable locations for growing thrifty, hardy, and dependable nursery stock there is in the United States. Our soil and climatic conditions are hard to equal here in the temperate zone, which enables us to grow stock that will thrive wherever it may be planted. Our seasons are such as to produce a uniform growth which is full of vitality and gives you hardy stock which when planted and cared for properly will give you a maximum of growth.

3. ADAPTABILITY

We have on file letters from nearly every fruit section of North America stating how well our stock succeeds. For instance, a planter in Nova Scotia, Canada, reports a loss of less than one tenth of one per cent on a seven thousand tree planting. Another planter in Texas says, "The best stock I have received. Every tree growing fine." Still another planter in Colorado reports, "Stock growing splendidly." A planter of three thousand trees in Ohio states his trees were making wonderful growth and expresses his regret that he did not make all his plantings from Bountiful Ridge trees. These and many other letters from mid-Western and Northern sections show that our stock has shown its ability to come through the most trying conditions. **We shipped trees and plants into forty-six states of the Union as well as the Dominion of Canada last spring with universal satisfaction to the grower.** We ask you to note the photograph of the young peach orchard near Columbia, South

Carolina. These trees are living examples of what can be done in the South with Bountiful Ridge trees. You are assured of satisfactory results with Bountiful Ridge stock wherever you are located, if your trees are properly planted and cared for.

ACTION

hundreds of letters on file attest the universal satisfaction growers all over the country are having with Bountiful Ridge stock purchased from Bountiful Ridge Nurseries. We pledge ourselves to give you the same satisfaction that makes growers so enthusiastic about buying from Bountiful Ridge Nurseries. We recognize our duty to our customers. The fact that our nursery has grown from a meager beginning until now we are distributing each year more than one half million fruit trees alone to the planters in all sections of the world attests to the universal satisfaction our stock is giving and our sincerity of purpose. Every purchase you make from Bountiful Ridge Nurseries must be satisfactory.

5. DELIVERY SERVICE

Our policy of giving free delivery on all orders of \$50.00 or more to distances of within five hundred miles of our nursery will be continued this year in spite of the fact that we are making drastic reductions in the prices of our products and freight rates have been advanced ten per cent. Where orders are large enough to justify it, our trucks will deliver direct to your farms. This means less than forty-eight hour service on your stock from the time it is dug until it is delivered, ready to plant. Special freight allowances will be made on large orders received from a distance of more than five hundred miles from our nursery. You will find a real spirit of cooperation when dealing with Bountiful Ridge.

6. CASH DISCOUNTS

We allow a cash discount on all orders received before April 1, 1939. Where cash accompanies the order, five per cent may be deducted, and also on large orders where twenty-five per cent of the amount is sent with the order and the balance is to be paid on delivery of the trees or remittance made before shipment. Put your money to work and take advantage of this liberal discount. You will recognize in our offerings the greatest values in trees and plants given in many years, the quality of the stock considered. **Buy and plant Bountiful Ridge grown trees and plants this fall. Make an investment for future income. Order promptly.** Our low prices are guaranteed only until January 1, 1939.

One of America's Leading Fruit Tree Nurseries Brings You the Finest Trees Man's Ingenuity Can Grow, the Cheapest Money Can Buy, Quality Being Considered

Trees Inspected for Trueness-to-Name

Amherst, Massachusetts
August 20, 1938

TO WHOM IT MAY CONCERN:

This is to state that we have examined for trueness to name all the saleable apple, pear, cherry, and plum stock of Bountiful Ridge Nurseries, near Princess Anne, Maryland, and as they now stand in the Nursery Row all varieties are, to the best of our knowledge and belief, true to name.

BLAXTAYMAN

TRADE MARK REG. U.S. PAT. OFF.

APPLE

The fruiting record of the Blaxtayman in 1937 has established it as one of America's foremost commercial apples and a leader of all improved types of Staymans now being offered. It is truly "The Glorified Staymans". Where ever it fruited in 1937 it had the unqualified approval of the grower. You should demand Blaxtayman when planting Staymans type this year and buy the true strain from Bountiful Ridge Nurseries.

Don't surround your orchard with a question mark by buying and planting "Red Staymans" know what you are planting and demand Blaxtayman.

All prices greatly reduced on Blaxtayman and Richared Delicious this year. We have some beautiful stock in both one and two year trees of these famous varieties as well as the Colora Red York.

NO ONE CAN QUESTION THE POPULARITY OF THE STAYMANS WINESAP ON THE MARKETS AND LACK OF COLOR WAS IT'S CHIEF FAULT. NOW THIS HAS BEEN OVERCOME WITH THE INTRODUCTION OF THE BLAXTAYMAN. THE COLOR IS EQUAL TO THE SOLID RED OF THE JONATHAN AND THE TREES AND BUDS HAVE THE SAME HARDY CHARACTERISTICS AS THE OLD STAYMANS.

The most beautiful Stayman of all time. Colors a deep, brilliant, solid red all over with out stripe, fully 3 to 4 weeks earlier than regular Staymans. The trees are hardy, vigorous, and spreading, bear early and very productive. The fruit is medium to large, skin smooth, flesh firm, tender and juicy, with a delightful sub-acid aromatic taste. Pronounced by many the finest of all dessert apples. Blaxtayman hailed as the finest of all Staymans. Plan to plant Blaxtayman this year for increased profit. SEE PRICES BELOW.

GALLIA BEAUTY

THE GROWERS' CHOICE WHEREVER IT IS PRODUCING IT LEADS ALL OTHER RED ROME BEAUTY TYPE APPLES. IT CAN RIGHTFULLY BE CALLED "ONE OF AMERICA'S MOST BEAUTIFUL APPLES". DEMAND THE GALLIA BEAUTY WHEN PLANTING THE RED ROME TYPE APPLE.

The Gallia Beauty originated in Ohio and is a typical Rome type tree, being thrifty, hardy and productive. The fruit of the Gallia Beauty colors a brilliant bright red, without stripe and seems to be of higher quality than the regular Rome Beauty, and keeps exceptionally well in storage. The Gallia Beauty will size up equal to the regular Rome but many of the other inferior so-called Red Rome types will not size up satisfactory and again we urge you to plant only the Genuine Gallia Beauty. We offer you the best and charge you no more; Prices of Gallia Beauty trees are the same as other standard varieties listed on page 3 of this price list.

Plant Bountiful Ridge Trees

for Quick, Dependable Results

The "COLORA" Red York

Granted Plant Patent No. 168 March 10, 1936

"The Planters Dream of A Bright, Solid Red, York Imperial Apple Has Come True."

NOW YOU CAN HARVEST 100% U. S. FANCY AND NO. 1 YORK IMPERIAL APPLES BY PLANTING THE "COLORA RED YORK." WITHOUT QUESTION THE FINEST TYPE OF RED YORK IMPERIAL APPLE NOW BEING OFFERED.

THE 1937 APPLE SEASON AGAIN DEMONSTRATED CLEARLY THE NEED OF AN IMPROVED YORK IMPERIAL APPLE.

NO GROWER CAN MINIMIZE THE IMPORTANCE OF EARLIER COLORING AND BETTER COLOR ON THE YORK IMPERIAL APPLE.

THE "COLORA RED YORK" IS YOUR ANSWER

IT NO LONGER PAYS TO PLANT THE OLD TYPE YORK WHE-
THER YOU ARE REPLANTING YOUR OLD ORCHARD OR MAKING
NEW PLANTNGS.

Trees Grown and For Sale Exclusively by
BOUNTIFUL RIDGE NURSERIES

We say without hesitation that this bids fair to become the most important apple to the fruit growers in the York Imperial producing area that has been offered to them in many years, for without question it will revolutionize the production of the York Imperial type of apple giving to the growers fruit that will color 100% over the entire tree under most any condition and will enable them to pick their York Imperial apples at least a week earlier if desired and to pick the entire tree at one picking and will nable them to pack out a fancy pack of York Imperial apples if desired.

These are the simple facts in regard to the "COLORA" Red York. We are not trying to paint a flowery picture that will deceive the planters as to its real value. The fruit which we have displayed during the past few years and which we are displaying this year came from the original tree and is grown at an elevation of approximately 300 ft. Most of the growers can realize what wonderful color this apple would show in the principal York producing area where the elevation ranges from 900 ft. to 1400 ft.

If there are further questions that any grower wishes to ask in regard to this variety, we will be glad to answer them if possible to do so. SEE PRICES ELSEWHERE ON THIS PAGE.

RICHARED

TRADE MARK REGISTERED
IN U.S. PATENT OFFICE

The DELICIOUS Supreme

IT HAS SUCCESSFULLY TRAVELED THE
EXPERIMENTAL ROAD

THE RICHARED DELICIOUS IN 1937 WAS GENERALLY RECOG-
NIZED AND TRULY PROVED TO BE "THE DELICIOUS SU-
PREME". ITS SUPERB QUALITY, ITS BEAUTIFUL,
BRIGHT, SOLID RED COLOR TYPIFIES ITS NAME—
"RICHER-RED"

The RICHARED DELICIOUS is a blood-red mutation of the Famous De-
licious Apple that promises to revolutionize the growing of Delicious apples. No
orchardist can overlook these facts about the RICHARED. You have a tree of
the same hardy characteristics as the old Delicious, producing an apple with
that same appetizing delicious flavor, producing an apple that colors a full
bright red, without a trace of stripe, on every part of the tree, the apple attain-
ing this color weeks before we usually pick the regular Delicious, thus enabling
everyone who grows it to eliminate the loss from drop apples, to pick earlier,
to market earlier, if he desires to do so, to seek a foreign market with a high
quality apple that has superior earrying qualities when picked early and to
keep it longer in storage for our late markets if desired.

The higher prices received during 1937 for the fruit of the improved strains
of the Delicious apple proved that the grower can "CASH IN ON AMERICA'S
MOST POPULAR APPLE WITH THE RICHARED DELICIOUS" and you
should plant this year for the future markets when quality and beauty of fruit
will prevail.

We Make These Great Price Reductions on Apple Trees

To Save You Money and Enable You to Plan and Plant for Future Production

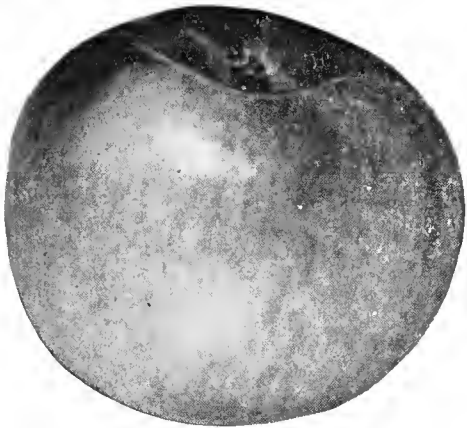

● We offer this year one of the largest and best lots of one and two year apple trees we have had in many years. Our two year, well branched trees are hard to equal and our variety assortment is one of the best available.

OUR NEW LOW PRICES on APPLE TREES

CORTLAND

CRIMSON BEAUTY. Hardy grower, very productive, early bearer, earliest apple known. Flesh sub-acid, pleasant to eat; ripens July 1. 1 yr. trees only.

YELLOW TRANSPARENT. Early bearer, fruit good size, skin clear, white to pale yellow, flavor very good. Ripens July 1-10.

LODI APPLE. The Lodi after being tested over quite a large area is now proving one of the most worthy Early Apples of recent introduction. It is of Transparent type only much larger and more firm. The tree is more spreading and vigorous and bears more regular than Transparent. It should be interplanted for cross Polonization. It ripens a few days later than Transparent but is large and can be picked with Transparent if desired. We ask no additional price for Lodi.

ANOKA. One of Prof. Hansens Hybrids and noteworthy for its beautiful red striped fruit and early bearing. The fruit is good quality ripening shortly after yellow transparent. 1 yr. trees only.

WILLIAMS EARLY RED. Largest of all early apples. Flesh white, juicy, tart, very good. Like Transparent bears young. July 10-15.

EARLY HARVEST (Yellow Harvest). Medium to large, beautiful, fine flavor. Ripens July 15-30. 1 yr. trees only.

EARLY McINTOSH. A McIntosh hybrid being almost solid red in color, very crisp and juicy, with same high quality as the well-known McIntosh. A thrifty grower and regular bearer. Follows Transparent close.

DUCHESS. Vigorous grower, Russian origin, large, striped tender, juicy, sub-acid; regular bearer. Very hardy tree.

STARR. One of the finest early apples grown in New Jersey. Large to very large, green in color. Tree develops rapidly, fruits young.

MELBA. A McIntosh in quality and appearance, only more flat in shape. Canadian origin. Tree vigorous and productive. 1 yr. trees only.

RED GRAVENSTEIN. Large striped apple ripening after Duchess, good quality and ripens over several weeks time.

MONMOUTH BEAUTY. One of the finest summer apples. Fruit large, excellent for cooking and eating.

MILTON. Typical McIntosh, coloring full red, very good quality. Tree hardy and vigorous. Ripens 3 to 4 weeks before McIntosh.

WEALTHY. Fruit brilliant red, fine quality, best of its season, good keeper, adapted to cold climates, bears early. Used as a pollinator. Season August 15-25.

SUMMER RAMBO. Large, flat, streaked red and yellow. Fine flavor, juicy, tender, productive. Ripens August 20-25.

TWENTY OUNCE. Fruit exceptionally large, sub-acid; color green slightly striped with red blush. Tree vigorous and one of our finest baking apples.

GRIMES GOLDEN. Highest quality fancy dessert apple. Ranks with Delicious and Jonathan. Medium to large, bright yellow, pink cheek. Tree: hardy, highly recommended to pollenize. Ripens September 10-15. The old home orchard standard and a great apple wherever planted.

SMOKEHOUSE. Moderate bearing. Fruit yellow, striped with dull red, very attractive. Ripens September 10-20.

NORTHWEST GREENING. Tree vigorous, hardy. Fruit large to very large; clear green skin, yellow fleshed, fine grained and firm. Very attractive.

JONATHAN. A good commercial apple, hard to equal for hardness and productiveness. Good quality, medium size, excellent eating and cooking apple. Used as filler and pollinator.

IMPROVED ALL RED JONATHAN. If you are not getting enough color on your Jonathan, plant this Improved strain. You will be satisfied with the results. Both 1 yr. and 2 yr. old trees available.

OPALESCENT. Very large, brilliant dark red all over; tree bears young and very prolific. Quality good. Its beauty and size gives it ready sale.

YELLOW DELICIOUS. This apple has received national publicity during the last few years. It is famous for quality, which is hard to equal. This combined with fine, firm texture of flesh and its golden yellow skin, attracts the consuming public. Tree thrifty and extremely productive, bears early with abundant crop while very young.

McINTOSH. Tree vigorous with spreading head, good bearer; fruit medium to large, brilliant crimson, flesh snow-white, crisp, slightly aromatic, good quality. Ripens September 5-20. One of the greatest general purpose home and commercial apples ever introduced.

IMPROVED ALL RED McINTOSH. A special selected strain of the famous McIntosh apple. Solid red color without stripe. Finest type of the McIntosh Red strain at present. Both 1 yr. and 2 yr. old trees available.

KENDALL. Has attracted more attention from fruit growers than any other new apple of McIntosh season. Apples large, whitish, fine grained flesh of McIntosh. Flavor the same. Apples hang better than McIntosh.

LAWFAM. A product of Central Experiment farm Ottawa, Canada. A cross between Lawver and Fameuse and one of the most beautiful of the new McIntosh types of apples. Excellent quality, fine tree growth and fruit hangs well to tree. A very deserving new type of the McIntosh which should be tried out promptly by fruit growers in the McIntosh districts.

LOBO. Same season as McIntosh, larger apple, colors earlier, full red, extra quality. Recommended for Southern growers.

MEDINA. Delicious shape and appearance. Recommended by N. Y. Fruit testing asso. to prolong the Delicious season.

ORLEANS. Same season as Delicious only better keeper in common storage. The flavor resembles that of Staymans. Apple shape and color of Delicious.

WINTER BANANA. Vigorous grower, early bearer. Fruit smooth and golden yellow usually shaded with red blush, flesh fine grained, rich, sub-acid.

TOLMAN SWEET. Medium to large size, pale yellow, firm, rich and very sweet. Vigorous, hardy and productive.

1 yr. Budded Apple Trees. No Better Can Be Grown

RHODE ISLAND GREENING. Fruit large and handsome. Dark green overspread with yellow. Flesh tender, rather acid, flavor excellent. Ripens September 25-30.

BALDWIN. No home orchard is complete without the Baldwin. An old favorite and one of the great apples in the northern sections. Noted for quality and long keeping merits. Tree very vigorous and productive.

CORTLAND. Improved McIntosh very similar but more uniform in size. Has more color but bright stripe. Apples firmer, just as juicy and do not strip. Good shipper. Becoming a great commercial apple.

YORK IMPERIAL. Fine, hardy, red Winter apple. Succeeds over a wide range of country. Bears four years from planting, regularly and heavy. Fruit of medium size, skin yellow covered with two shades of red. October 1.

ALBEMARLE-NEWTON PIPPIN. Large, smooth skinned, beautifully colored yellow apple. A valuable market variety. Tree long lived and productive.

NORTHERN SPY. Large, roundish-conical, slightly ribbed, handsomely striped with red, flavor rich, aromatic, mild sub-acid. Renowned for fine quality.

RED NORTHERN SPY. A typical Northern Spy except in color. The Red Spy colors a solid red without stripe or splashes.

MACOUN. Very highly colored, no stripe. Same quality as McIntosh, same texture fruit. Hangs better than McIntosh. Ripens 2 to 3 weeks after Cortland. Recommended to extend McIntosh season.

TURLEY. A Winsap seedling tree, vigorous grower, resembles Staymans, apples large, almost solid red, texture of fruit like Staymans. Productive.

STAYMANS WINESAP. Most profitable apple ever grown in the fruit areas of the Central States. Tree vigorous and hardy, early bearer, very productive, fruit medium to large, skin smooth, slightly striped, colored to dull red. Flesh yellow, firm, rich, sub-acid, aromatic, a splendid late keeping variety. October 10-15.

ROME BEAUTY. Keeps in good condition until May and June. Large round, mottled and striped different shades of red. Flavor and quality average; always sells and brings good prices.

GALLIA BEAUTY RED ROME. Rightfully called the world's most beautiful apple. A typical Rome type tree being thrifty, hardy, productive. The fruit colors a brilliant bright red. Keeps extremely well in storage.

PARAGON. One of the best of the long keeping winter apples. Does well on most any soil; thrifty grower and fruits young, bears regular. Winesap type, fine quality, nicely colored red with yellow flesh.

WINESAP. Medium size, dark red, juicy, mild. A favorite late winter apple and a leading commercial variety on all markets, as well as a very popular home apple in the West. A high-class dessert apple. Nov 1st to 10th.

CRAB APPLES

Prices same as other standard apple trees.

HYSLOP. Fruit medium, deep crimson and splashed with maroon. Flesh fine, tree vigorous where hardy.

TRANSCENDENT. Season September. Fruit brownish-yellow blushed with carmine. Flesh firm, tree vigorous grower, hardy.

DOLGA. A handsome red crab apple of medium size. The fruit jellies easily. Tree vigorous, hardy and productive.

● NATURE AGAIN TRIUMPHS BY GIVING TO THE FRUIT GROWING WORLD WHAT MAY PROVE TO BE TWO OF THE MOST OUTSTANDING PEACHES DISCOVERED IN RECENT YEARS.

The FISHER peach was discovered as a bud sport of the VALIANT in August 1934 near Queenston, Ontario, Canada. Mr. Fisher found these large well formed peaches growing on a single limb of a Valiant tree in his orchard, being attracted to the peach from the fact that it was ripening fully 3 weeks before the Valiant peaches on the rest of the tree. He was amazed by this freak of Nature and immediately examined the tree carefully and the limb seemed to be perfectly sound and healthy. Realizing the commercial possibilities of a peach of this type and season, Mr. Fisher's next concern was whether the fruit would carry through to succeeding generations. To test it as quickly as possible he top worked a two year old Valiant tree with 12 buds from the Sport limb the first week in September 1934. Every bud lived on the Top worked tree and made a very remarkable growth during 1935, developing a number of fruit buds on the new growth. The Parent limb again bore a heavy crop in 1935 and the peaches developed as they did in 1934. THE PEACH WAS MEDIUM TO LARGE, YELLOW FLESHED AND A FREESTONE. THE PEACH HAS A DARK RED BLUSH COVERING NEARLY HALF OF THE PEACH; EXCELLENT FLAVOR, FINE GRAINED FLESH SHOWING NO RED ABOUT THE PIT. THE PEACHES HANG WELL TO THE TREE. The Parent limb repeated with a fine crop in 1936 and the top worked tree set a crop which required thinning, the remaining peaches on the top worked tree developed exactly as those on the Parent Limb. HERE WAS A PEACH OF FINE QUALITY, A YELLOW FREESTONE PEACH, RIPENING SEVERAL DAYS BEFORE ORIOLE AND 10 DAYS BEFORE GOLDEN JUBILEE, THE PEACH SHOWING EVERY INDICATION OF DEVELOPING INTO A GREAT COMMERCIAL PEACH. In 1937 Mr. Geo. W. Kemp and Mr. Homer Kemp of our nursery journeyed to Canada to see this peach. The original limb as well as the top worked tree had a fine crop and on August 12, 1937 we photographed the peach in colors with our moving Picture equipment so we could show these pictures to our customers and let them see for themselves just what the fruit was like. We also photographed the Marigold, Oriole and Golden Jubilee in the same orchard so as to give the comparative season of these varieties. We have entered into a growing and distribution contract with Mr. Fisher for the distribution of this peach to our customers in the United States and Canada.

WE ARE FRANK IN SAYING THE PEACH HAS GREAT COMMERCIAL POSSIBILITIES BECAUSE IT IS OUR EARLIEST YELLOW FREESTONE PEACH OF FINE QUALITY. IT IS A SPORT OF THE VALIANT WHICH HAS ADAPTED ITSELF OVER A WIDE AREA IN THE U. S. AND WE BELIEVE THE "FISHER PEACH" WILL ADAPT ITSELF TO OUR GROWING CONDITION HERE IN THE STATES. Trees of the Fisher Peach have been widely distributed to determine this fact. The trees grow well here at Princess Anne and we should have some fruit here during 1939 and the U. S. D. A. Station, Beltsville, Md. should have fruits from their test trees in 1939. Our supply of trees is very limited this year and we must limit all of our customers to NOT MORE THAN (30) thirty trees to a customer, except in the smaller grades as priced. We certainly recommend the variety be planted in all fruit growing sections of North America for trial. PLACE YOUR RESERVATION PROMPTLY AND REMEMBER THE VARIETY IS PATENTED WHICH PROHIBITS ALL PROPAGATING FOR ANY PURPOSE BY THE PURCHASER.

The "ERLY-RED-FRE" originated as a chance seedling in the orchard of Wm. Perry near Chase City, Virginia. Apparently the "ERLY-RED-FRE" is the result of the planting of a Red Bird seed. The parent tree is now about nine years of age. Our attention was first called to this splendid peach in 1935 and we instructed Mr. Perry to bud the variety off to see whether it would reproduce true to type in succeeding generations. The second generation tree bore the first crop in 1937 at 2 years of age. The fruits on these second generation trees being identical to those of the original tree. In 1938 both the original and second generation trees had a full crop on them which required heavy thinning. We firmly believe that this peach if it will adapt itself to the varied growing conditions in the peach districts will prove to be one of the most valuable peaches ever introduced to the peach growing world. We have never in all of our observation of peaches known of an early peach having so many good characteristics which are so outstanding, that we believe it stands today without an equal for its season. The peach tree this year bloomed medium early. The blossoms are of a medium open type and pink and self-pollinating. We picked the first peaches from the second generation trees this year on June 11 at Chase City, Virginia. The entire crop could have been picked between June 11 and June 17 for general market purpose. This is about the same season as the Red Bird or Early Wheeler, preceding the Golden Jubilee from two to three weeks. The fruit is very highly colored with an attractive bright red on a creamy white background. The skin is tough and medium thick. The flesh of the peach is of such texture that it does not show bruises readily and is clear white through to the pit. We believe this peach has one of the smallest pits of any cultivated variety we know of in existence today. The flesh of the peach in many cases is nearly one inch thick from the pit to the skin. We have sent these peaches for hundreds of mile by parcel post for observation and in all cases they have carried through to destination in excellent condition. It shows unusual quality being comparable to a well ripened Bella Georgia. The peach when ready to pick resembles in shape the Hiley Belle. It will average under proper growing conditions 2 1/4 inches and up in size and it can be classed as a Freestone peach. This year because of excessive wet weather occasional peaches on the tree adhered slightly to pit. Two of the outstanding characteristics of the variety is its ability to crop and its pronounced resistance to brown rot. This year the second generation tree only received two sprays after the blooming period and at picking time did not show any brown rot, whereas Red Bird in the same orchard under the same growing conditions were completely destroyed with brown rot. This peach should prove indispensable to the peach growing world and we are confident that it will succeed in most all peach growing sections. It will come on the market in the southern districts without any competition from any source in a white Freestone peach.

Our supply of trees for delivery this year is very limited. All orders will be acknowledged in accordance with stock and size trees available when order is received. The smaller grade trees which we offering are June budded trees of our own growing here at Princess Anne.

NOTE: This variety is protected by U. S. Plant Patent and cannot be propagated by anyone other than Bountiful Ridge Nurseries for any purpose.

Peach Growing Proves One of America's Best Paying Crops

● Plan and plant Bountiful Ridge Trees this year to maintain your production. Replace those inferior varieties with newer varieties of superior quality, more attractive appearance and more certain bearing ability. Plant to give the consuming public peaches of fine quality throughout the season. We offer peach varieties adapted to every growing section and every purpose. Plan to plant this year.

NOTE

Ripening order of varieties designated by bracketed numbers after name. Varieties overlapping in ripening season indicated by sub-letter. Example, Elberta and Hale are about same season and are designated by numbers 13 and 13A. We have endeavored to give you authentic ripening order of varieties, we list, but variations may occur due to soil, fertilization and climatic conditions.

MAYFLOWER. (1) Earliest peach. Red all over, size medium, quality good, semi-cling.

MIKADO. (2) The Mikado is again being given a great deal of publicity as a hardy, productive, early yellow peach ripening about two weeks after Mayflower or six weeks before Elberta. The tree is of medium size and vigor and should be interplanted with other varieties for cross-pollination, as it has self-sterile blossoms and will not produce unless inter-planted. The fruit is medium in size, round, semi-cling, attractive yellow and blushed with red. Quality is very good. If properly grown will ship well.

RED BIRD (Early Wheeler). (3) Earliness, high color and productiveness make it very valuable. Cling, very large. Creamy white over-spread with a bright, glowing red. Good shipper.

ERLY-RED-FRE. (3a) See opposite page.

GREENSBORO (Semi-Cling). (4) Large yellow with splashes of bright red; highly colored; flesh white, very juicy and of good quality. Hardy, early.

EARLY ROSE. (5) A white cling peach. Variety is a favorite with Southern peach growers.

FISHER PEACH. (5a) See opposite page.

ORIOLE. (6) Introduced by New Jersey experiment station in 1925 an early yellow freestone peach ripens a few days ahead of Cumberland. Fruit medium size, yellow in color, blushed with red, and notable for fine quality. Tree is vigorous and productive. The fruit buds are very resistant to cold and will grow where others fail in northern section. A fine peach for local markets.

CUMBERLAND. (6a) A N. J. Station Product. A seedling crossed with Greensboro. The tree is a vigorous grower and as hardy as Carman. The fruit is larger than Belle of Georgia; attractively colored with red, oval in shape. The flesh is white, almost free, firmer and better quality than Carman or Alton. Ripens just before Carman.

GOLDEN JUBILEE. (6b) A development of the New Jersey Experiment Station, first offered by us during the Fall shipping season of 1928. Planted and producing in every peach producing section of the United States and Canada and stands without an equal as an early, yellow, freestone peach of exceptional quality. The Golden Jubilee is a second generation seedling of the Elberta crossed with the Greensboro. The tree is unusually hardy. The buds resist low Winter temperatures better than Elberta and open later than Elberta which insures a regular crop. The blossoms are self-fertile. The peach is medium to large size and firm. From observation we find that the peach develops better if a well balanced fertilizer is used and in the lighter sandy soils of the Southern Peach producing areas where Jubilee is inclined to set too heavy a crop, better fruit is obtained by thinning the fruit on the tree. As the tree grows older the fruit becomes firmer and develops more naturally. It proved to be the best money-making peach of the South this year, many sales running as high as \$3.00 per bushel and we believe it will continue to gain in favor wherever it is properly cared for. **NO GENERAL PLANTING OF PEACHES IS COMPLETE WITHOUT A LIBERAL AMOUNT OF GOLDEN JUBILEE TREES.** Ripens about four to five weeks before Elberta.

CARMAN. (6c) Hardy, sets fruit well, early white peach, red color, flesh medium fine, juicy. A home market variety.

RADIANCE. (7) Large oval, white fleshed, freestone, good quality, good color, ripens after Carman.

FAIRS BEAUTY. (7a) An early peach following Golden Jubilee three to five days. Tree vigorous, spreading, very hardy in bud, often producing a crop when other varieties are winter killed. Fruit is medium to large in size, skin a deep golden yellow blushed with bright red, the flesh is firm, tender, melting and juicy. Fruit hangs exceptionally well to tree and when full ripe is a perfect freestone, clinging slightly when the peach is hard ripe, an excellent market and canning peach which is adapted to both commercial and home use. It is recognized in the South as a superior early yellow canning peach. We strongly recommend this peach for trial as a commercial variety. The Fairs Beauty originated near Tyler, Texas and in trial plantings shows its adaptability to central and eastern growing conditions.

ROCHESTER. (8) Large, yellow and red peach. Flesh yellow and of fine quality.

1200 Trees Planted — 1200 Trees Growing

- Orchard Planted Dec. 10 to 15, 1936. They show an average growth of 5 ft. to 5½ ft. and 1.28 inches tree trunk diameter Oct. 1, 1937.

- THESE TREES WERE BOUNTIFUL RIDGE GROWN, 3-4 ft. GRADE, YEARLING STOCK OF THE HALE HAVEN VARIETY PLANTED AT SAND HILL EXPERIMENT STATION, COLUMBIA, S. C.

- THESE TREES WERE GROWN RIGHT - DUG RIGHT - PACKED WITH CARE - PLANTED RIGHT AND CARED FOR PROPERLY. THEY HAVE MADE AN ENVIRONMENTAL RECORD.

Medium Early Varieties

COLORA. (9) Our own introduction of a hardy peach, introduced Spring of 1936. A new frost resistant, yellow freestone peach. This peach originated in Cecil County, Maryland, as a sprout coming from the root of a Brackett tree planted about 1920. It has been producing constantly since about 1925 and came through many years with a full crop when the buds of Brackett on the same tree were entirely frozen out. Second generation trees as well as the original branch have withstood temperatures during the past winters of about 17 degrees below zero, when most other varieties such as Elberta, Hiley Belle, Belle of Georgia, Early Elberta and J. H. Hale were wiped out by these low temperatures. The peach is an attractive yellow, freestone, well-colored and of excellent quality, ripening about 15 to 20 days before Elberta. In size, it is about the same as Elberta, being typical Elberta in shape. We believe the planters will find this a valuable variety for planting in cold areas.

VEDETTE. (9a) A product of the Vineland Experimental Station, in Canada, proving unusually well adapted in the various peach growing sections of the United States. A seedling of Elberta, resembling that variety in color and type of flesh, but is more globular in shape, more highly colored, and of much finer quality. The fruit is of large size, yellow fleshed, freestone. The tree is vigorous, very hardy, comes into bearing early and is very productive. The Vedette is proving very satisfactory in trial plantings near Columbia and Clemson, South Carolina, as well as other peach growing sections of the Central and Eastern States. The fruit is firm and a good shipper, ripening about one week after Golden Jubilee. A fine peach that promises to be a real money-maker for the Southern Planter as well as other sections, replacing the old Hiley with a larger, better quality, yellow, freestone, productive peach.

NEW EARLY HILEY. (9b) A new strain of this famous peach originating in Georgia. Has all the characteristics of its famous parent, but is a full week earlier in ripening.

HALE HAVEN (10)

THE HALE HAVEN COMES THRU - NORTH, EAST, SOUTH, WEST - IN 1938

We know of no peach of recent introduction that is proving so universally satisfactory as the Hale Haven. It is now an unchallenged leader of peaches to follow Jubilee, Vedette and Golden East being its nearest rivals. A product of the South Haven experimental station in Michigan. A definite improvement over the South Haven, being more resistant to low Winter temperatures. Freestone, tough skin, highly colored, adapted to large commercial plantings. Tree vigorous, fruit large globular shape as Hale. Resembles this variety. Two weeks earlier than Hale and Elberta. Extremely high quality, good shipper.

SOUTH HAVEN. (10a) An excellent peach, tree thrifty and productive. Peach of Elberta type, ripening 15 to 18 days before Elberta. Freestone,

yellow fleshed, ripens its crop over a period of ten days, making it desirable for local or roadside markets.

HILEY BELLE. (11) Medium size, white fleshed, freestone peach, beautiful red blush, and tough skin, juicy and tender.

SLAPPY IMP. (11a) A selected strain of Slappy which we consider superior to the regular Slappy variety. Yellow freestone, very good quality, ripening Hiley Belle time.

VALIANT. (11b) A seedling of Elberta introduced by Experiment Station, Vineland, Ontario, Canada. A large yellow fleshed, high colored peach, ripening 3 to 7 days after Vedette. Excellent quality fruit, hardy tree and very productive. We recommend it for trial.

ECLIPSE. (11c) Dark red, yellow fleshed, freestone peach, firm texture, good flavor. Ripening with Hiley.

CHAMPION (Free). (11d) Large yellowish-white mottled with red. Flesh white and red at pit.

CRAWFORDS EARLY. (11e) Large, round, bright yellow with red cheek, flesh yellow, juicy, sweet, quality good.

FITZGERALD (Free). (11f) Improved Early Crawford. A bright yellow blushed with red. Flesh deep yellow and of best quality. Early freestone.

EARLY ELBERTA. (12) A great commercial peach in the Central and Northern peach producing areas where the markets are not too distant and quality is a deciding factor. One of the most beautiful of the Elberta type peaches. A very large, attractively colored, yellow fleshed, freestone peach ripening with Belle of Georgia or from 3 to 8 days before the regular Elberta. The highest quality peach of all the Elberta types grown commercially. The trees are hardy, thrifty, and bear consistently. The deep lemon yellow colored skin, blushed with bright red makes it very attractive and the peach retains a beautiful golden yellow color after being canned. **IF YOUR MARKET DEMANDS QUALITY AND BEAUTY PLANT THE EARLY ELBERTA.** Our trees are propagated from the old original strain of Early Elberta.

PRIMROSE. (12a) A large yellow fleshed, freestone of good quality, ripens with Belle of Georgia.

BELLE OF GEORGIA. (12b) Fruit large, color red and white, flesh white, firm, highly flavored.

**... The Famous ELBERTA Again
Registers in 1938 as America's
Leading Commercial Peach**

ELBERTA. (13) Without question the greatest commercial peach ever introduced. It has proven its ability to adapt itself to varied climatic and soil conditions throughout the U. S. and Canada, whether the climate is hot or cold, whether the soil is light sand or heavy clay, Elberta can be depended on to give you fine results. There is no prettier peach when grown under ideal conditions.

The tree is hardy, disease resistant, very thrifty and very productive under most conditions. The fruit is large to very large, a freestone, skin a deep golden yellow and highly colored. The skin is tough and the flesh, while tender and juicy, is of such texture that the ELBERTA IS FAMOUS FOR ITS ABILITY TO CARRY TO DISTANT MARKETS. The quality is classed as good, and the slight bitter flavor is preferred by many. It is estimated that 50% of all peaches planted are Elberta. As improved types and varieties are introduced this ratio is lowered but after all is said ELBERTA STILL REMAINS THE WORLD'S LEADING COMMERCIAL PEACH. We are propagating our Elberta trees from selected orchards of great bearing records and to the old original type Elberta. This year we cut budwood from 43 year old Elberta trees which had borne 38 years without a crop failure. We know our Elberta trees will give you results.

J. H. HALE. (13a) Skin deep crimson, smooth type without fuzz, flesh golden-yellow, firm, has delicious flavor. Valuable as a commercial peach. Will ship nearly as well as an apple. Ripens a few days before Elberta. Self-sterile blossoms.

GAGE ELBERTA. (13b) A disease resistant bud sport of the famous Elberta peach. This splendid peach originated in the orchards of Mr. John Gage near Texico, Illinois. Recommended for resistance to bacterium pruni. The tree grows thrifty as the Elberta and looks much like the old time Elberta. Ripens 2 to 3 days after the regular Elberta.

THE BRACKETT PEACH. (14) This is a comparatively new variety in some sections, but has been tried and proven one of the most profitable peaches in the South. Its season is about five days after Elberta, with a beautiful orange-yellow skin tinged with earmine. Flesh is a deep yellow and much

PEACHES TO PLANT

Quality - Appearance - Productive

WE PRESENT ONE OF THE GREATEST SUCCESSIONS OF HIGH QUALITY PEACHES THE PLANTER HAS EVER HAD THE OPPORTUNITY OF BUYING. PLANTING THESE VARIETIES MEANS GREATER SUCCESS IN PEACH GROWING.

higher flavored than Elberta. This peach sizes up well under heavy crops and is equal to Elberta as a shipper. A perfect freestone.

SHIPPERS LATE RED (Big Red. (14a) Large, highly colored attractive red, yellow fleshed freestone. Quality peach of distinct Hale type. Ripens just after Elberta and J. H. Hale. A good shipping peach, very hardy. Recommend highly for a peach to follow the Elberta.

HOPE FARM. (15) Introduced by us in 1925. A large white fleshed freestone peach of superior quality. Follows the Elberta about five days in ripening. Partially self-sterile. Fine for roadside market.

WILMA. (15a) Very large, late yellow freestone peach, fine color, good quality, ripens 5 to 8 days after Elberta. Tree hardy.

CRAWFORDS LATE (Free). (16) Large, roundish, oval, yellow with broad red cheeks, flesh yellow, very good.

ROBERTA (Augbert). (16a) Very similar to

Elberta except its season. One week to 10 days later.

IRON MOUNTAIN. (17) Free, white, medium to large size, color poor, white with slight blush, good quality, good keeper.

LIZZIE. (17a) Distinct Elberta type peach, very large, freestone, yellow flesh, excellent quality. Ripens 12 to 16 days after Elberta.

SALBERTA. (18) Large yellow freestone peach, Elberta type, good color and quality similar to Robert. Ripens 1 week later.

HEATH CLING (Cling). (18a) Very large, creamy white with delicate red blush, flesh white, juicy and sweet. Valuable for canning.

SALWAY (Free). (19) Large, round, deep yellow with rich red cheeks, flesh yellow, firm. Trees hardy. Late market sort.

KRUMMEL'S OCTOBER. (20) Fine peach, best late yellow freestone, ripening after Salway or 6 weeks after Elberta. Medium large, almost round, deep yellow, earmine shaded, very firm.

Yearling Peach Trees or June Bud Peach Trees Which Will You Plant?

We are going to present a few facts about the growing of peach trees by these two methods and let you be the judge as to which type of tree you should select for planting.

1. Yearling peach, or dormant bud peach as they are sometimes called, are produced by planting the peach seed in the fall, allowing the seedling to grow during the following summer, the tree then being budded in August, as a rule. This bud remains dormant until the following spring when the seedling top is removed and the bud allowed to grow, giving the bud a full summer to make its growth and maturity. In the yearling tree you have a root growth of two years and a top growth of one year.

2. June budded peach are produced by planting the seed in the fall, budding these seedlings early the following summer in May or early June. The bud grows very fast in the seedling tree at this season of the year. At the time of budding, the seedling is cut off broken in the top to throw the strength of the tree to the bud, and as soon as the bud starts, the seedling is further broken down, and in a short time the entire top of the seedling is removed. As the bud starts its growth and continues to grow, it starts to branch. The branches are suckered out to a certain height, destroying the leaf germ where the limb is removed, so that it will never or rarely start a new limb at this point. This is done principally to force the tree to a greater height. Under favorable conditions June budded trees grow very rapidly and in most cases are dug and sold to the planters that same year, thus giving him only a one year root and a one year top to the tree.

We are told that a tree gathers many of its vital elements from the air, which are stored in the body and root system so that it can come back with full vitality after going into the dormant stage during the winter months. This is a logical fact which has been proved many, many times. Considering this fact, we at once recognize that the yearling trees have a definite advantage over the June budded trees because the seedling has a full year of growth to gather these elements, and the new buds have a full years growth to gather these im-

portant elements from the air, whereas the June budded seedlings grow less than three months, and then go for a period of four to six weeks during the best of the growing season when there is no leaf surface whatever on the tree, to gather these elements, thus compelling the tree to gather what it can of these important elements in a period of less than ninety days after the bud starts to grow. We know that millions of June budded trees have been planted in orchards of Central and Southern areas, and many of them develop rapidly into fine orchards, due principally to the long growing season in those sections. However in recent years definite proof has been established that yearling trees planted at the same time as June budded trees have out-grown and produced heavier crops earlier than the June budded trees. Definite proof has been established, also, that a better orchard tree can be developed from a yearling tree than a June budded type, due principally to the method employed in removing the lower limbs from the June budded trees, which results in destroying the body buds on the tree, where often one of the main scaffold branches of the tree should be formed.

It has also been found that yearling peach trees have proved more disease resistant to many of the common diseases of the peach tree in the Southern peach producing areas. The yearling peach tree has a harder wood and a harder root system in which to store an abundance of vitality and natural stamina for resisting diseases, which the young and more tender wood of the June budded trees does not have, due to its very short growing life before being taken from the nursery row.

These are simple facts which can be readily substantiated and which every planter should consider before buying his trees. It is true that June budded peach trees are usually cheaper, but can you afford to delay the development of your orchard for one or two dollars per acre? (This usually represents the difference in the cost of the two types of trees). Remember, your trees are the smallest cost you have in the development of your orchard. Plant Bountiful Ridge grown yearling peach trees this year. With our existing low prices we believe you will see the logic of the above statement and plant yearling trees.

PEONIES

**THIS FINE ASSORTMENT OF PEONIES AT
EXTREMELY LOW PRICES**

All varieties: 25c each; \$2.00 for ten plants. All 3 to 5 eye divisions.

FESTIVIA MAXIMUM. Large full bloom, pure white, with an occasional earmine spot; strong grower. One of the best early white varieties.

FLORAL TREASURE. Large compact flower of delicate pink borne in great profusion on erect stems. One of the best peonies for home and commercial use. Mid-season.

FELIX CROUSSE. Large, compact, deep rose red, and fragrant. Strong grower; free bloomer. Considered the best one-color red in cultivation. Mid-season.

EDULUS SUPERBA. Large, bright pink with slight violet shading at the base of the petals. Fragrant, early, strong grower, very free-bloomer. The best early commercial pink.

L'ECLANTE. Velvety crimson. A color one never forgets. Truly a beautiful mid-season peony.

LOUIS VAN HOUTTE. Deep rose red. One of the

good late red peonies. Fragrant.
MESSONIER. Brilliant, rich crimson. A rival for Felix Crousse. One of the best mid-season red peonies.

MONS. DUPONT. Creamy white and very fragrant. A beautiful and delicately colored peony.

PHILOMELE. Yellow, fading to cream. Very fragrant. One of the few good yellow peonies.

Lawn Grass Seed

Prices given are Per Pound

Never Die—One of the most famous and satisfactory seed mixtures on the market. It contains only proven perennial grasses of beauty and service. 50c per lb., 45c for 20 lbs. or over, 40c for 50 lbs. or over.

Fairmount Park—Recommended for poor soil as it will produce a heavy, thick turf and is properly blended to produce good sod throughout the growing season. 40c per lb., 35c for 20 lbs., 30c for 50 lbs. or over.

Bloomsdale—This mixture is composed of an old-

fashioned formula of Kentucky Blue Grass and Fanev Reeleand Red Top. Turf produced from this seed grows better with each succeeding year. This mixture does not contain clover unless specially ordered. 38c per lb., 35c for 20 lbs., 30c for 50 lbs. or over.

Evergreen—This is a quick growing mixture, free of noxious weed seeds and low in inert matter. You will be pleased with its results. 35c per lb., 30c for 20 lbs., 25c for 50 lbs. or over.

SPECIAL PURPOSE FORMULAS

Shady Place—If possible plant this mixture very early in the Spring or late in the Autumn for best results. Special shade grasses are used and are necessary for success in shaded areas. 50c per lb., 45c for 20 lbs., 40c for 50 lbs. or over.

Seashore—Composed of grasses recommended by the N. J. Dept. of Agriculture for good results on sandy soil. 45c per lb., 40c for 20 lbs., 35c for 50 lbs. or over.

Southern Winter—Used extensively in the South and contains Rye Grass and Bermuda. 25c per lb., 22c for 20 lbs., 19c for 50 lbs. or over.

White Dutch Clover seed, 60c lb., 5 lb. lots, 50c per lb.

The Wise Man Selects and Plants Bountiful Ridge Grown Stock

Our Prices Low - Our Stock Is Superior. Why Pay More?

APRICOTS

MOORPARK. Largest, orange-yellow flesh, sweet, juicy and rich. August.

EARLY GOLDEN. Good variety, very large, deep golden-yellow, fine quality, superb. Tree large, thrifty, hardy. Fruit beautiful, yellow flesh, firm and solid.

SUPERB. Rated by many as the best of our older and widely planted varieties of apricots. The tree is large, very thrifty and hardy and is extremely productive. Very good quality. Fruit is beautiful yellow with slight blush; flesh firm and solid.

ROYAL. A leading variety in the western regions. Trees strong and vigorous and productive. Fine shipping and canning variety. Fruits mid-season; pale yellow in color with orange cheek tinged with red dots, flesh is rich, firm and juicy.

All varieties, 4-5 ft., 9/16 branched each 60c; 10-\$5.00

The New Sure Crop Nectarine

Imported to this country from New Zealand. The tree is vigorous and productive. The fruit is large, roundish, white, and overlaid with very attractive red. The flesh is firm, tender, free from stone, and very pleasing flavor. Late mid-season.

	Each	10	50

Medium size, 2 yr., 4-5 ft.70	6.00	45.00

BRADSHAW. Very large, dark violet-red, flesh yellowish-green, juicy, pleasant. Tree vigorous.

FELLENBURG or ITALIAN PRUNE. Dark purple with dark blue bloom. Medium size, oval, flesh juicy, delicious, fine for canning.

GERMAN PRUNE. Esteemed for drying and preserving. Large, oval, purple with heavy blue bloom. Flesh firm. September.

IMPERIAL GAGE. Large, oval, yellowish-green, flesh greenish, juicy, best quality. September.

LOMBARD. Medium round, oval, violet-red, juicy, pleasant. Clings. A good market sort. Hardy.

SHROPSHIRE DAMSON. Fruit oval, medium size, produces clusters, good fruit for preserving.

DAMSON. Old fashioned blue damson known to every housewife for the fine jelly and preserves they make. Prolific bearers.

ABUNDANCE. Yields abundantly, medium size, bright cherry red, highly perfumed, flesh yellow, juicy and tender, excellent quality. Tree vigorous, hardy.

BURBANK. Medium to large, orange-yellow, dotted, mottled with red. Flesh yellow, good for canning and market. Hardy, prolific.

NEW PLUMS

10c per tree higher than regular plums listed above in all grades.

STANLEY. A cross between Agen and Grand Duke. The fruit is of the prune type, excellent for cooking or eating out of hand. The tree is healthy, vigorous and produces full crop annually. Fruit is large in size, dark-blue with heavy bloom; flesh, greenish-yellow, juicy, fine-grained, tender, firm, sweet, pleasant; quality, good to very good. Free-stone. Mid-season. Stanley is one of the New York Experiment Station's prize plums.

EARLY ITALIAN PRUNE. Same size, quality and color as Italian Prune but two weeks earlier. 1 yr trees only.

PEAR TREES

	Each	10	100
Large size, 2 yr., 5-6 ft.	\$.75	\$6.00	\$50.00

Large size, 1 yr., 4-5 ft.60	5.00	40.00
Medium size, 1 yr., 3-4 ft.50	4.00	35.00

BARTLETT. Large size, golden-yellow when ripe with beautiful blush next to sun. Buttery, juicy, highly flavored. Tree strong grower, bears early and abundantly. August and September.

CLAPPS FAVORITE. Large, fine pear resembling Bartlett. Melting, buttery, juicy with delicate flavor. Tree hardy and productive. August and September.

BUERRE BOSCH. Large, yellow pear, flesh white, rich and delicious. Keeps until Christmas.

GORHAM. Ripens 2 weeks later than Bartlett, keeps longer. Fruit like Bartlett in size, color and shape. Flesh white and highly flavored. Very blight resistant.

OVID. Ripens later than Gorham. A Bartlett type pear very large in size, good flavor, white fleshed. A very late keeping Bartlett type pear.

DUCHESS D'ANGOULEME. Very large, greenish-yellow, sometimes russeted. Makes a beautiful tree, heavy bearer, buttery, melting and sweet.

ANJOU. Large fine pear, buttery and melting. Tree fine grower, productive. October to January.

FLEMISH BEAUTY. Large, juicy, and rich. A strong grower and good bearer, hardy but prefers sunny location. September and October.

SECKEL. Small, rich, yellowish-brown. One of the best flavored pears known. September and October.

KEIFFER. Tree practically immune to blight, very thrifty and bears consistently heavy crops. Fruit large to very large, golden-yellow, often blushed, juicy and one of the best pears. Keiffer has been very profitable in recent years.

SHELDON. Large, round, russet and red pear, very rich, fine quality. Tree vigorous, bears well. October.

SWEET CHERRY TREES

Our supply of 2 year sweet cherry is very limited. We do have a fine lot of 1 year sweet cherry that are hard to equal. You will find these trees ideal for orchard planting.

Can supply one year stock on Mazzard Root all grades. 5c extra per tree.

	Each	10	100
Large size, 2 yr., 5-6 ft.	\$.85	\$7.00	\$65.00

Extra fine, 1 yr., 4 ft. up.70	5.00	45.00
Medium, 1 yr., 3 ft. up.60	4.50	40.00
Small size, 1 yr., 2 ft. up.50	4.00	30.00

SENECA. Earliest good sweet cherry, ripens 2 weeks before Black Tartarian, large, purplish-black, melting, flesh very sweet. Tree vigorous and productive.

BLACK TARTARIAN. Very large, bright purplish-black, juicy, rich, trees vigorous and an erect grower. June.

BING. This black cherry succeeds everywhere. Flesh solid, flavor the highest. Fine shipping and marketing variety. July.

LAMBERT. Largest of all cherries, purple-red, firm and rich. Grows well.

NAPOLEON BIGGAREAU (Royal Ann). Beautiful cherry of large size, pale yellow with bright red cheeks, flesh firm, juicy, and sweet.

SCHMIDT'S BIGGAREAU. Fruit very large size, deep mahogany color, juicy, and fine flavor. Fruit grows in clusters. July.

WINDSOR. Tree vigorous and rapid grower. Fruit large, firm and juicy, quality good, heavy bearer, almost black in color. July.

GOVERNOR WOOD. Large, heart-shaped; light yellow, mottled light red, juicy, sweet and rich. Tree vigorous, productive; forms a round head. An old variety still a favorite in many regions.

SWEET SEPTEMBER CHERRY

New Fall Bearing

There is no previous record in the history of Horticulture of a Fall-bearing cherry until accidentally discovered by an amateur Horticulturist in North-western Ohio. The fruit, for some unknown reason, ripens in September instead of June. The fruits are an attractive medium dark red similar to the Windsor, deliciously sweet, excellent for eating fresh or canning. It ripens in Ohio about September first. It is a remarkable fact that the young trees produce fruit two or three years after planting. Apparently, the tree is free from rot, leaf spot, and curculio injury.

	Each	10
3-4 feet	\$1.50	\$14.50

SOUR CHERRY TREES

The extremely heavy demand for Sour Cherry last year absorbed practically all one and two year trees available and this year our offerings are confined principally to one year stock, grown here at Princess Anne. These trees are exceptionally fine running mostly to the larger sizes. A cherry orchard planted from these trees will certainly give results.

Prices one year Sour Cherry Trees:

	Each	10	100
1 yr., 3½-5 ft., 9/16-11/16.	\$.60	\$5.00	\$40.00
1 yr., 2½-4 ft., 7/16-9/16.50	4.00	35.00
1 yr., 2-3 ft., 5/16-7/16.40	3.00	25.00

2 year Sour Cherry Trees 5c per tree less than 2 yr. Sweet Cherry Trees.

Montmorency Cherry on Mazzard Root 5c per tree more.

ENGLISH MORELLO. Easily grown, generally producing a heavy crop. Fruit dark red, quality good; rich, acid flavor; late. Hardy for extremely cold latitudes. August.

EARLY RICHMOND. One of the most valuable and popular cherries, unsurpassed for cooking purposes. It is the good old variety that yields such marvelous crops in the gardens. The most hardy of all varieties, uninjured by the coldest winters.

LARGE MONTMORENCY. This is the best of all the sour varieties of Cherries. There is a greater demand on the market for this Cherry than any other. The trees are the cleanest and best grow-

ers and are less subject to disease, less affected by wet weather, and are the best bearers of the best fruit of all other sour varieties. No matter how unfavorable the season may be, Montmorency can be depended upon for a full crop. The Montmorency is a good shipper, very attractive looking, and always brings good prices.

NUT TREES

BLACK WALNUT

ENGLISH WALNUT

SCHLEY PECAN. Schley and Stuart stand at head of list. Schley is thrifty, hardy grower. Nuts well filled, has paper-like shell. Fine 2-3 ft. \$1.00 each, grafted trees.

STUART PECAN. Probably the best known and most valuable of all Pecans. Nuts good size, shell very thin, easily opened. Fine 2-3 ft. \$1.00 each.

SUCCESS PECAN. Nut large and oblong, shell thin; used for pollinizing purposes in commercial plantings of Schley and Stuart. Fine, heavy 2-3 ft. \$1.00 each.

BENGE BLACK WALNUT. Specially selected variety of Black Walnut having unusual merit. These trees are grafted and bear early. Large 3-4 ft. \$1.00 each.

BLACK WALNUT. The common Black American Walnut grows everywhere.

	1	10
4-5 ft.	\$.70	\$6.00
3-4 ft.50	4.00

THOMAS BLACK WALNUT. One of the largest and finest Black Walnuts of fine quality. Extremely vigorous and hardy; grafted trees.

	1	10
3-4 ft.	\$1.00	\$9.00
4-5 ft.	1.25	11.00

ENGLISH WALNUT. Tree valuable for fruit and shade. Our trees are grafted. Nuts thin-shelled, with full meat kernels. Tree hardy and productive.

	1	3	10
Heavy trees, 3-4 ft.	\$1.00	\$2.85	\$9.00
Japan Walnut, 2-3 ft.60	1.60	5.00
Butternut, 3-4 ft.70	2.00	6.00

AMERICAN FILBERT (Hazel Nut). Long a favorite having attractive bush. Yields abundant crop, bears young. Not a tree.

	1	3	10
Heavy plants, 2-3 ft.	\$.65	\$1.65	\$5.00

BARCELONIA FILBERT. One of the newer varieties widely grown in the Northwest for market purposes.

	1	3	10
Selected 2-3 ft.	\$.70	\$1.95	\$6.00

DuCHILLY FILBERT. Very prominent in the Northwest where it is widely grown for market purposes. Nuts very large.

	1	3	10
Selected 2-3 ft.	\$.70	\$1.95	\$6.00

FIG TREES

MAGNOLIA FIG. One of the hardiest species, doing well where the winters are not too severe. Fruit very large and of rich straw color. Fruit begins to ripen the last of June and continues to put on new fruit until frost. 2 to 3 feet, 80c each; \$6.00 for 10; \$50.00 for 100.

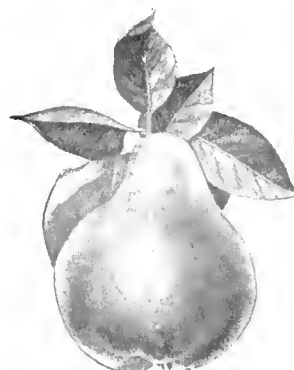

QUINCE TREES

All Varieties, 2-year, 4 to 5 Feet, 5-8 inch Caliber 75c each; \$6.00 per 10

2 yr. 3-4 ft., 65c each, \$5.00 for 10

ORANGE. Roundish bright golden yellow, very large, fine grained, fine quality. Best for cooking. Firm, will stand shipping.

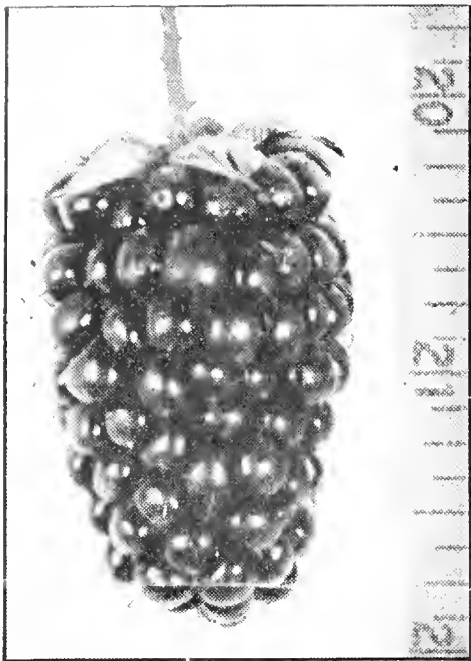

CHAMPION. Fruit very large, fair and handsome. Bears abundantly while young; flesh cooks as tender as an apple without hard spot and cores; flavor delicate; quince taste.

CHAMPION QUINCE

Early Profit-Makers For Every Farm

● A DEPENDABLE SOURCE OF INCOME THAT PAYS BIG DIVIDENDS ON LOW INVESTMENTS—
STRAWBERRIES, RASPBERRIES, BOYSENBERRIES, DEWBERRIES, ETC.

THE NEW BOYSENBERRY

NEW BOYSENBERRY. Said to be the largest and finest berry ever introduced. It is a new variety produced by crossing the Blackberry, Raspberry, and Loganberry. The flavor is a very pleasing blend of these varieties. Berries are extremely large, many of them getting more than 2 inches long and over 1 inch in diameter. Comes into bearing the next year after planting and one planting lasts for many years. It is a vigorous grower and should not be planted closer than 6 ft. apart. Succeeds better when trained on wires similar to grapes. The fruiting season is longer than most vine berries, lasting about two months. It is not unusual to pick 20 baskets of berries to the plant the second year after planting. We recommend this wonderful berry to you for a trial in your next planting and feel it will prove a valuable addition to your present list of small fruits.

20c each; 10 for \$1.25; 50 for \$5.00; 100 for \$8.00; 500 for \$30.00.

All prices are for strictly first class 1 year plants.

BLACKBERRIES

Blackberries are among the best known and most valued of our berries. No fruit of any kind is more wholesome. A liberal use of berries and other good fruits will save doctor bills.

Prices—Strong Rooted Cutting Plants, All Varieties: \$.50 per 10; \$1.00 per 25; \$1.50 per 50; \$2.50 per 100; \$7.00 per 300; \$20.00 per 1000

BLOWERS. Large size, jet black, good shipper, best quality and unexcelled productiveness are the main characteristics of this splendid new sort.

ELDORADO. Vine is vigorous and hardy; berries are very large, black, borne in clusters.

ALFRED. One of the finest of all early Blackberries. Very productive, superior in quality, berries very large, and practically free from seed, very juicy.

DEWBERRIES

The Dewberry is a dwarf and trailing form of the Blackberry. A great market and home berry.

LUCRETIA. Hardy and remarkably productive. One of the best of the Dewberry Family. Ripens early, and can be highly recommended.

AUSTIN. Fruit large. Plant very productive. Ripens 8 to 10 days before Lucretia.

1 year.....\$.45 \$.75 \$1.50

Acme Thornless Youngberry

SOLD FOR SPRING DELIVERY ONLY

RASPBERRIES

No garden or truck farm is complete without a liberal planting of Raspberries. They are delightful for canning purposes or as fresh fruit.

BLACK RASPBERRY VARIETIES

CUMBERLAND. The most widely planted commercial black Raspberry. The largest of all Black Caps; healthy, and vigorous grower. Fruit very large and firm. No Raspberry Planting is complete without them. Mid-season.

1 yr. Plants....\$.40 \$.75 \$1.25 \$2.25 \$6.00 \$16.00

NEW LOGAN. The most dependable of all Early Black Raspberries. Extremely resistant to Mosaic and other Raspberry diseases. Berries are large, glossy black. Extremely heavy producer, ripening a week before Cumberland.

No. 1 Tips....\$.45 \$.90 \$1.25 \$2.25 \$6.00 \$16.00

BLACK BEAUTY. A recent introduction and especially resistant to disease. Very hardy and productive. Berries are large, good quality and about the same season as Cumberland.

No. 1 Plants....\$.50 \$1.00 \$1.50 \$2.50 \$6.75 \$20.00

RED VARIETIES

ST. REGIS EVERBEARING. An everbearing variety that gives a crop of fruit all summer and autumn. Berries are bright crimson, large size, very good quality. One of our most dependable everbearing Raspberries.

No. 1 Plants....\$.50 \$1.00 \$1.50 \$2.50 \$6.75 \$20.00

LATHAM. Our greatest commercial Red Raspberry. Very hardy. Mosaic free, thrifty and extremely productive. Berries large, brilliant red color. Mid-season.

1 yr. No. 1....\$.45 \$.90 \$1.50 \$2.50 \$6.75 \$19.00

CHIEF. The best of the early Red Raspberries. Extremely productive, very good quality, hardy and very vigorous and especially resistant to Mosaic.

No. 1 Plants....\$.45 \$.90 \$1.50 \$2.50 \$6.75 \$19.00

NEWBURG. A recent introduction. Plants are vigorous and disease resistant and hardy. Berries are large, of very good quality and extremely productive. The best of the late Red Raspberries.

1 yr. Selected....\$.50 \$1.00 \$1.50 \$2.50 \$7.00 \$20.00

CUTHBERT. The old favorite. Berries are medium size, bright red, excellent quality. Plants vigorous, hardy, and productive.

No. 1 Plants....\$.45 \$.90 \$1.50 \$2.50 \$6.75 \$19.00

FLAMING GIANT. A new Red Raspberry becoming popular because of its brilliant red color and good quality. Especially adapted to Southern climatic conditions.

1 yr. Selected.....\$.80 \$1.50 \$5.00 \$12.00 \$25.00

THREE NEW OUTSTANDING RED RASPBERRIES

TAYLOR. The Taylor fills a long felt desire for a perfect Raspberry. The berries are very large, much larger than the Latham. They are a bright red color with a complete lack of crumpling which adds to their attractiveness. The flavor is subacid of the highest quality. Ripens same season as the Latham. Prices: 1 yr. No. 1 sucker plants, 25 for \$1.25; 50 for \$2.00; 100 for \$3.75; 300 for \$10.00; 500 for \$15.00; 1000 for \$27.50. Prices 1 yr. No. 2 suckered plants, 25 for \$1.00; 50 for \$1.60; 100 for \$3.00; 300 for \$8.50; 500 for \$12.50; 1000 for \$22.50.

MARCY. A recent introduction that promises to be a money-maker. The berries are large, mild in flavor and good quality. The plants are tall, vigorous and healthy with sturdy canes which should need no support. Marcy is worth a trial it being especially noteworthy for the productiveness of its plants and the size of the berries. Prices: 1 yr. No. 1 plants, 25 for \$1.35; 50 for \$2.25; 100 for \$4.00; 300 for \$10.50; 500 for \$16.00; 1000 for \$30.00.

INDIAN SUMMER (New Everbearing). Berries are large, medium red in color and of high quality. Well suited for market gardeners and nearby markets. They are decidedly superior to any of the fall-bearers that have up to this time been offered to the trade. The plants are vigorous and bear heavy crops both spring and fall. Prices 1 yr. No. 1 Plants, 25 for \$1.50; 50 for \$2.75; 100 for \$5.00; 300 for \$13.50; 500 for \$20.00; 1000 for \$37.50.

One million Bountiful Ridge Grown plants in this field. Living examples of vigor and thriftiness—they will give results wherever planted.

STRAWBERRY PLANTS

This seal on the label of your Strawberry plants indicates they are Bountiful Ridge Grown and is your guarantee of True-To-Name, Thrifty, Productive, Dependable plants.

The Eastern Shore of Maryland again proved it was the dependable place to buy Strawberry Plants last year. Our plants are looking fine this year and we shall have several millions of as good plants as it is possible to grow. All of our plants are produced by the matted row system and will not be sufficiently rooted for shipment until September 10th to 20th for this Fall's planting. Strawberries sold well this year and again proves every farm should have some strawberries on it for market purposes. We will have the plants and our prices will be right so don't fail to get in touch with us for your plantings next Spring and don't fail to plant some Dorsett, Fairfax and Catskill, our three outstanding new varieties.

"THE NEW BLAKEMORE"

THE EAST'S GREATEST COMMERCIAL BERRY NOW OFFERED IN A YELLOWS RESISTANT STRAIN.

AFTER SEVERAL YEARS TESTING THE U. S. D. A. RELEASED STOCK PLANTS TO PLANT GROWING NURSERIES SPRING OF 1937. OUR PLANTS DID UNUSUALLY WELL PRODUCING MORE NEW PLANTS THAN ANY OTHERS RELEASED IN THIS SECTION AND NOT A SIGN OF YELLOWING OF THE FOLIAGE OR DISEASE OF ANY KIND. AT THE REQUEST OF THE U. S. D. A. WE SENT PLANTS FROM OUR NEW BEDS TO MOST ALL THE BERRY PRODUCING SECTIONS AS STOCK PLANTS. WE MADE A LIBERAL PLANTING OF OUR OWN AND TODAY HAVE A SUPPLY OF OVER ONE MILLION PLANTS OF THIS NEW STRAIN BLAKEMORE. NO STRAWBERRY GROWER CAN NOW AFFORD TO PLANT THE OLD TYPE BLAKEMORE AND THIS GREAT COMMERCIAL BERRY WILL CONTINUE TO BE ONE OF THE GREATEST BERRIES OF RECENT INTRODUCTION. SEE PRICES ABOVE AND WRITE FOR PRICES ON LARGE QUANTITIES.

Plant Bountiful Ridge Selected Small Fruits

They Are Always A Dependable Crop For Extra Profits

BLUEBERRIES

A New and Delightful Fruit

Improved cultivated varieties which bring the highest market prices. A fruit which is becoming well known in the Eastern markets. Full cultural methods sent on request.

We recommend spring planting for Blackberries north of Virginia latitudes.

Shipped by express only.

Order 2 different varieties to have proper polonization.

RANCOCAS. Bush with slender, vigorous up-right habits. Barely surpasses 5 ft. in height. Berries large and early.

CONCORD. Bush is upright and at maturity exceeds 6 ft. in height. Berries very large.

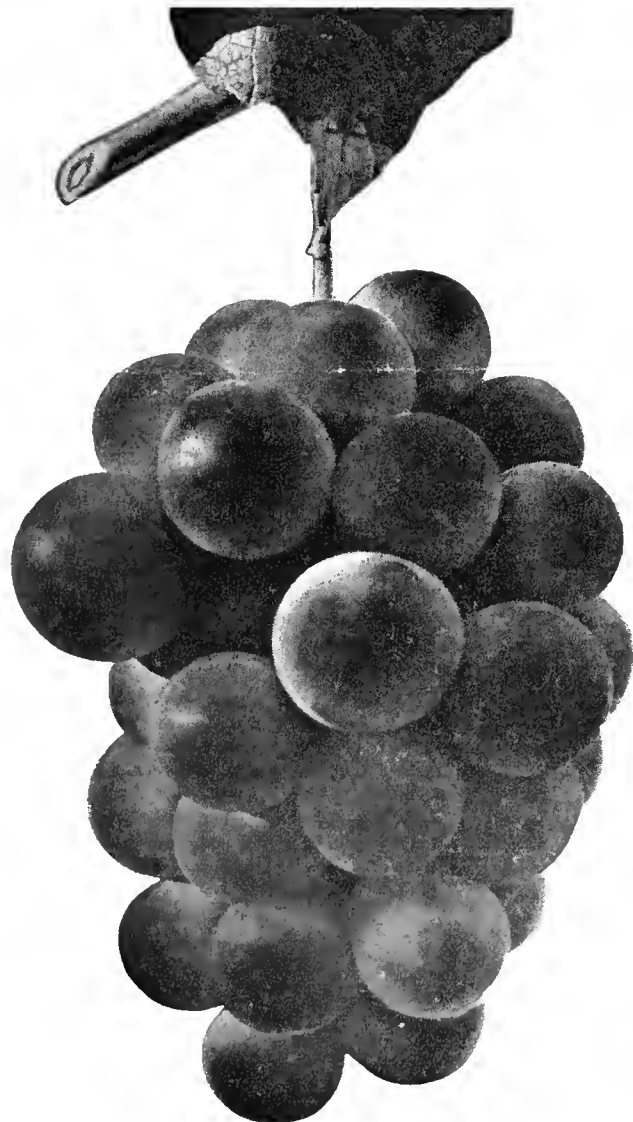

JERSEY. Bush is of vigorous habit and grows very large. Berries very large.

RUBEL. Well developed bush, vigorous and beautiful. Berries large. Principal commercial variety.

PIONEER. Bush is stocky, seldom exceeding 4 ft. Tendency to be broad rather than high. Very heavy producer.

STANLEY. A recent development fast being recognized in the N. J. Blueberry section as one of the outstanding Blueberries. Vigorous plant, large berries very productive.

GRAPE VINES

Grape production promises to again become one of our most profitable fruits to grow. We list here a grape for every purpose, whether it be for Dessert, Juice, or Wine. Because of the wet conditions in the principal grape plant producing areas plants are not plentiful and we are fortunate to be able to offer our patrons these splendid vines at these low prices.

CONCORD. The standard commercial grape. The standard by which all other black grapes are judged. A lifetime money maker.

MOORE'S EARLY (Black). Early black, similar to Concord in looks and quality.

NIAGARA. Occupies the same position among the white varieties as the Concord does among the black.

DELAWARE. One of the highest quality grapes in cultivation. Extremely hardy.

WORDEN. Seedling of the Concord which it greatly resembles in appearance and flavor, but berries are larger.

CATAWBA. Bunches medium, shouldered; berries large, deep coppery-red. Aromatic, rich.

AGAWAM. Bunches large, berries large, reddish-brown, tender, vinous and of excellent flavor.

CACO (Red). This new grape is of the highest quality, being so rich in sugar and excellent flavor it can be eaten two weeks before it is ripe.

PORTLAND. Holds first place among grapes as an early green variety. Vine very vigorous, hardy and healthy. Bunches and berries larger than any other green grape. Very fine quality.

FREDONIA. Promises to be the earliest good black grape. Fine, vigorous, hardy, and productive. Two weeks earlier than Worden.

SHERIDAN. A promising late keeping grape to extend the Concord season. Hardy and vigorous. More productive than Concord.

GOLDEN MUSCAT. Possesses the rich golden color of Diamond and the fine muscat aroma of the European Muscat. For home use and roadside market it is one of the best. Vine vigorous and productive. Clusters large, berries large, juicy and tender. Golden Muscat is the handsomest and best flavored grape grown in eastern America. Ripens after Concord.

MOORE'S DIAMOND. An early white grape and a favorite in many sections. Good quality.

ASPARAGUS

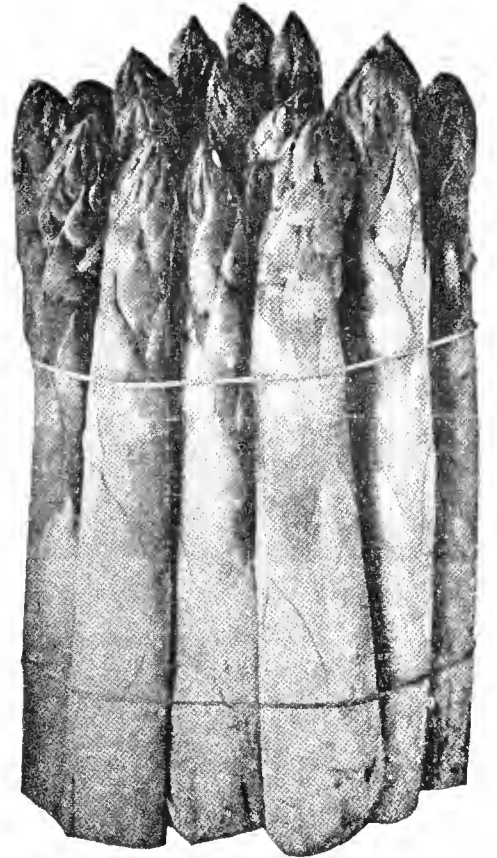

Asparagus culture, where you have land that is adapted to growing it, has proven to be one of the most profitable of the farm products. It should be planted on loamy soil for best results.

We advise that you plant the rust-resistant varieties known as Washington, for they have proven the most profitable.

MARTHA WASHINGTON. Of same hardy characteristics as the Washington Pedigreed, only considered an improvement of that variety. Very rust-resistant. The stalks are large, dark green, with a heavy purple over-tone. The tips are tight and firm and do not open until well out of ground.

MARY WASHINGTON. This is considered one of the best of the Washington kinds of Asparagus. It starts early and produces a heavy crop of very large, tender asparagus. Green in color and very good quality.

SHOEMAKER'S STRAIN GIANT MARY WASHINGTON. This strain of Washington asparagus seems to produce larger stalks, and will continue to produce heavier and over a longer period in the spring cutting season than any other type of Washington Asparagus. We can supply this variety in both one and two year roots and recommend the asparagus growers try this type. It is very Rust Resistant.

ASPARAGUS PRICES

Prices all varieties:	25	100	500	1000

"It's Not A Home Until It's Planted"

Plant Bountiful Ridge Grown Stock for Permanent Beautiful Homes and Lawns

FLOWERING SHRUBS

THE BEST OFFERED AT THE LOWEST
PRICES IN OUR HISTORY.

BUYS YOU MAY NEVER BE ABLE
TO DUPLICATE

In many cases it would be better to plant Shrubs in groups of several to one side of the lawn instead of following the method of planting one in a certain place and spoiling the effect of the open lawn. In most cases, three, six, eight or twelve of one variety should be used in a particular grouping. Several such groupings make an excellent border or foundation planting.

ALTHEA (Rose of Sharon). Double assorted colors; red, white lavender and blue. 2 to 3 feet, 25c each; \$2.00 for 10.

BUTTERFLY BUSH. Blooms profusely; lilac-color, tapering panicles. No. 1 plants, 2-year, 18 to 24 inch, 30c each.

NEW RED LEAF BARBERRY. Similar to Barberry Thunbergi but the foliage of this new variety is of a rich, lustrous, bronzy red. Becomes more brilliant throughout the summer. 12 to 15 inch, 30c each; \$25.00 per 100; 18-24 in. 50c each; \$1.00 for 10.

BEAUTYBUSH. General resemblance to both Weigela and Honeysuckle, beautiful trumpet shaped flowers. Pale pink with orange veins in the throat. 18 to 24 inch, 45c each; 5 for \$2.00.

INDIAN CURRANT. Valuable for planting in shady places; foliage is very persistent. The fruit is purplish-red. 18 to 24 inch, 25c each; \$2.00 for 10; 2 to 3 ft., 35c each; \$3.00 for 10.

SNOWBERRY. An upright, low-growing shrub with pink flowers. Showy white berries in fall. 2 to 3 ft., 40c each; \$3.50 for 10.

DOGWOOD (Red-Twigged Dogwood). Good for border groupings, where the smooth, slender, bright red branches in winter make a very pleasing contrast with evergreen and snow. Thrives in shade. Height, 6 to 8 feet. 2 to 3 feet, 25c each; \$2.00 for 10.

CREPE MYRTLE. Blooms throughout the summer great clusters of delicately fringed flowers. Perfectly hardy as far north as New Jersey. We have pink and red. 18 to 24 inch, 50c each; \$1.50 for 10.

DUETZIA (Pride of Rochester). Produces white flowers tinged with rose; vigorous grower. 18 to 24 inch, 25c each; \$2.00 for 10; 2 to 3 feet, 30c each; \$2.50 for 10.

DUETZIA LEMOINE. Dwarf habit of growing. Literally covered with snow-white flowers. 18 to 24 inch, 40c each; \$3.50 for 10.

FORTUNE'S GOLDEN BELL. Flowers bright yellow and appear before the leaves very early in the spring. 2 to 3 feet bushes, 30c each; \$2.50 for 10.

FORSYTHIA (Intermediate). Blooms early, frequently covered with golden flowers while the ground is still covered with snow. 2 to 3 foot plants, 30c each; \$2.50 for 10.

FORSYTHIA VERDISSIMA. Flowers deeper yellow and somewhat twisted. 2 to 3 foot plants, 30c each; \$2.50 for 10.

FLOWERING ALMOND, DOUBLE PINK. Covered in May with rose-colored blossoms like small roses; hardy. 18 to 24 inch, 40c each; \$3.50 for 10.

HONEYSUCKLE, PINK TARTARIAN. Pink flowers that make a lovely contrast with the foliage. Fine 2 to 3 foot bushes, 30c each; \$2.50 for 10.

EUROPEAN CRANBERRY BUSH. Large bunches of crimson berries throughout winter. The flowers are pure white. 2 to 3 ft., 40c each.

JAPAN QUINCE SCARLET. Flowers a bright scarlet crimson; foliage bright glossy green. 18 to 24 inch, 40c each; \$3.50 for 10.

HYDRANGEA ARBORESCENS STERILIS (Hills of Snow). Handsome foliage and snow white, ball-shaped clusters of flowers. Blooms the greater part of summer. 18 to 24 inch, 35c each; \$3.25 for 10.

HYDRANGEA (Paniculata Grandiflora). A shrub; flowers borne in huge panicles; light pink; blooms in August and September. 2 to 3 ft., 40c each; \$3.25 for 10.

HYDRANGEA P. G. (Tree Form). Same as above except trained to single stem with well-formed top. 3 to 4 foot stems, well topped, \$1.00 each; 4 to 5 ft., \$1.50 each.

HYDRANGEA OTAKSA. Flowers generally blue, with a few exceptions, when they are a delicate pink. 2-year, No. 1 plants, 70c each; \$6.50 for 10.

LILAC, WHITE. Its flowers are white and fragrant. Fine 18 to 24 inch, 40c each; \$3.50 for 10.

LILAC, PURPLE. The well-known purple variety. Fine 18 to 24 inch, 40c each; \$3.50 for 10.

LILAC (Persian). A favorite among the purple lilac. 18 to 24 inch, 50c each; \$4.50 for 10.

LUDWIG SPAETH LILAC. Single, dark purplish red. 18 to 24 inch, 50c each; \$1.50 for 10.

PRESIDENT GREY LILAC. Double, bright blue. 18 to 24 inch, 50c each; \$1.50 for 10.

SNOWBALL COMMON. The old-fashioned Snowball; pure white flowers May and June. Fine 2 to 3 feet, 45c each; \$1.00 for 10.

JAPANESE SNOWBALL. Pure white blossoms. 18 to 24 inch, 50c each.

PINK KOREAN SNOWBALL. Blooms profusely in early spring; flowers are pink. 12 to 18 inch strong plants, 80c each; \$7.50 for 10.

OAK LEAF HYDRANGEA. One of the best of the newer types of hydrangeas. Upright to drooping in growth, attractive foliage. Blossoms are compact large panicles similar to hydrangea P. G. coming early in the season and remaining on the plant until September. Flowers changing in color from white to pink. A beautiful plant that you will enjoy. 2 to 3 ft. plants, 60c each; 10 for \$5.00.

SPIREAS VAN HOUTTE. Most popular of all the Spiraea. Its gracefully arching branches heaped as they are with the white blossoms in spring and its thriftiness under the most trying conditions are the reasons for its popularity. 18 to 24 in., 20c each; \$1.50 for 10; 2-3 ft., 30c each; \$2.50 for 10.

SPIREA ANTHONY WATERER. Popular low-growing bush, blooms all summer. Flower deep rose. 35c each; \$3.00 for 10.

SWEET SCENTED SHRUB or CALYCANTHUS. Wood is scented, the foliage rich, and flowers of a rare chocolate delightful odor. The old fashioned shrub bush that used to be in every yard. 2 to 3 ft., 40c each; \$3.50 for 10.

PHILADELPHUS. Grandiflora (Mock Orange). Large spreading bush, graceful drooping branches; flowers slightly fragrant. 2 to 3 ft., 30c each; \$2.50 for 10.

PHILADELPHUS, Virginialis (New). Finest of the new Mock Oranges. Very large flowers. 2 to 3 ft., 30c each; \$2.75 for 10.

PHILADELPHUS, Coronarius Mock Orange). Pure white, very fragrant flowers; first to bloom. 2 to 3 ft., 30c each; \$2.50 for 10.

TAMARIX AFRICANA. Upright habit, with airy, slender leaves; profusion of dainty, soft pink flowers in May. 1½ to 2 ft., 30c each; \$2.50 for 10.

WEIGELA EVA RATHKE. Flowers a brilliant crimson; a beautiful clear bush. 18 to 24 inch bush, 40c each; \$3.50 for 10.

WEIGELA ROSEA. Fine rose-colored flowers appearing in June. 2 to 3 ft., 35c each; \$3.00 for 10.

ORNAMENTAL HEDGES

THERE IS A PLANT FOR EVERY PURPOSE

Select Them and Plant at These Low Prices.

NEW RED LEAF BARBERRY. Similar to Barberry Thunbergi but the foliage of this new variety is of a rich, lustrous bronzy red. Becomes more brilliant throughout the summer. 6 to 9 in. seedlings, 10 for \$1.00; 100 for \$8.00. 12 to 15 in. transplants, 10 for \$2.25; 100 for \$20.00. 15 to 18 in. transplants, 10 for \$2.75; 100 for \$25.00.

JAPANESE BARBERRY. A pretty dwarf species. Handsome foliage of bright green leaves which turn to the most brilliant shades of coppery red and orange in autumn and which remain on until late Fall. Lined with small scarlet berries which hang on until well into winter. 9 to 12 in. seedlings, 10 for 50c; 100 for \$3.50; 1000 for \$30.00. 12 to 15 in. transplants, 10 for \$1.25; 100 for \$12.00; 1000 for \$100.00. 18 to 24 in. transplants, 10 for \$2.50; 100 for \$20.00; 1000 for \$180.00.

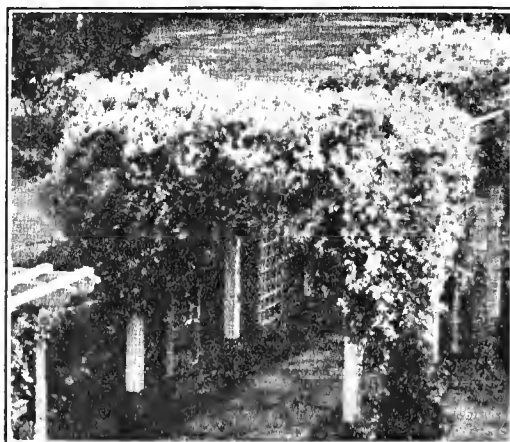

AMOR RIVER PRIVET NORTH. A valuable ornamental shrub for hedges and borders; very hardy; foliage glossy green, and holds its color almost the entire year; will stand shearing to any extent. Well branched. 12 to 18 in., 10 for 80c; 100 for \$7.00; 1000 for \$50.00. 18 to 24 in., 10 for \$1.00; 100 for \$8.00; 1000 for \$65.00.

CALIFORNIA PRIVET. California Privet will give you living fences for less than you can build them of wire. Can be sheared into any shape or size. 12 to 18 inches, 40c per 10; \$3.00 per 100; \$25.00 per 1000; 18 to 24 inches, 60c per 10; \$4.00 per 100; \$35.00 per 1000.

CLIMBING VINES

COVER THOSE BARE, UNSIGHTLY WALLS AND
TRELLISES WITH BEAUTIFUL CLIMBING
VINES—WE LIST A CLIMBING VINE
FOR EVERY PURPOSE.

PURPLE WISTERIA. Flowers light purple and blue in early spring, large drooping clusters; for arbor plantings. Price, 2-year grafted plants, 40c each; \$3.50 for 10.

SILVER LACE VINE

WHITE WISTERIA. Resembles the purple variety, but with white flowers. Price, 2-yr. grafted plants, 40c each; \$3.50 for 10.

CLEMATIS PANICULATA. A great novelty from Japan. This variety of Clematis has proven to be one of the most desirable of hardy garden vines. Price, 2-year, 40c each; \$3.00 for 10; \$27.50 for 100.

CLEMATIS JACKMANI (Large Flowering Clematis). Produces a mass of intense violet-purple flowers 4 to 6 in. in diameter. July to October. 2-year, 70c each; \$6.00 for 10; \$55.00 for 100.

HALL'S JAPAN HONEYSUCKLE. Strong, vigorous vine with pure white flowers, changing to yellow; foliage green all winter; covered with flowers almost the entire season. 2-year strong plants, 25c each; \$2.00 for 10.

ENGLISH IVY, HEDERA HELIX. This popular evergreen vine with medium size dark green leaves is extensively used in this country for covering brick and stone walls and dwellings. 2-yr., 30c each; \$2.50 for 10.

BOSTON IVY. Foliage handsome in summer, changing to crimson-scarlet in autumn. Clings to walls and fences; fine for brick and stone. 2-yr. strong plants, 30c each; \$2.50 for 10.

KUDZU VINE. Large foliage and dense shade, growing 50 feet in one season. Flowers plentiful in August; rosy purple, pea-shaped—in small racemes. 2-year, 35c each; \$3.00 for 10.

SILVER LACE VINE. A quick growing climbing vine; recommended for its thriftiness and beauty. The foliage is heavy, covered with white, silvery blossoms. August until fall. 50c each; \$4.50 for 10.

Flowering and Ornamental Trees

JAPANESE BLOOD LEAF MAPLE. We offer this rare and beautiful tree in grafted stock. A good dwarf tree with rich purplish red leaves. 18 to 24 inch, \$1.50 each; \$12.50 for 10.

BECHTEL'S DOUBLE FLOWERING CRAB. Most beautiful of the flowering crabs; tree medium size, covered in early spring with large, double fragrant flowers, delicate pink. 2 to 3 feet, 60c each; \$5.50 for 10.

JUDAS TREE or RED BUD. The profusion of delicate reddish-pink blossoms with which it is covered in early spring before the foliage appears make it one of the finest ornamental trees. 3 to 4 feet, 50c each; \$4.50 for 10.

DOGWOOD, WHITE FLOWERING. Large white flowers appear in the spring before the leaves. Scarlet fruits are borne in the autumn and the leaves turn to a deep red. 3 to 4 feet, 75c; \$6.00 for 10; 4 to 5 feet, \$1.00; \$9.00 for 10.

DOGWOOD, PINK FLOWERING. A colored form of the native species Dogwood. Rose-colored blossoms. Nice 2 to 3 feet trees, \$1.50 each; \$12.50 for 10.

MAGNOLIA SOULANGEANA. Best known of the deciduous Magnolias. Hardy and a very beautiful plant when in bloom. Blossoms large purplish-pink and white, and usually appear on the plant just before the leaves come out. 2-3 ft. light plants, \$2.00 each; 18-24 inch, \$1.50.

FLOWERING CHERRY

KANZAN. Large, double, pink blossoms borne in profusion. 2-year 6-foot trees, \$2.00 each.

MT. FUJI. Without a doubt the very best white flowering cherry. Tree upright in growth, but droops naturally when in bloom...Large 2-year 6-foot trees, \$2.00 each.

AMANAGAWA. Large double blossom, not so intense pink as Kanzan; forms a beautiful tree and should be in your collection. 2-year, 6-foot trees, \$2.00 each.

NADEN. Large pale pink flowers, being very double. Tree upright and spreading; presents a most beautiful sight when in bloom. 2-year, 6-foot, trees, \$2.00 each.

KOFUGEN. One of the most profuse blooming flowering cherry. Flowers are very large and very double, sometimes being almost pure red. Tree vigorous, spreading. Should be in every planting if you wish real beauty. 2-year, 6-foot trees, \$2.25 each.

Japanese Weeping Cherry

SUBIURTELLA. Weeping double flowering cherry. Profusion of large pink blossoms in early spring make it a favorite. 5 to 6 ft. stems, 2-year grafted heads, \$2.75 each.

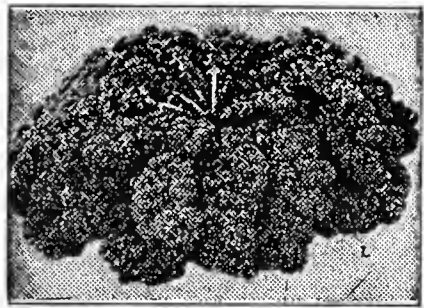

Other Weeping Ornamental Trees

SHIPPED ONLY BY EXPRESS or FREIGHT

TEA'S WEeping MULBERRY. A graceful hardy tree, forming a umbrella-shaped head, with willow-like branches drooping to the ground; foliage small, lobed, and fresh, glossy green. First-class 2-year heads, 5 to 6 foot stems, \$2.00 each; \$17.50 for 10.

WEeping WILLOW, BABYLONIAN. The well-known common weeping willow; makes a large tree covered with drooping branches. 6 to 8 ft., \$1.00 each; \$9.00 for 10.

CUT LEAF WEeping BIRCH. One of the most beautiful weeping trees. Pyramidal in growth habit. Dark green leaves and shiny white bark. 5-6 ft., \$1.50 each; \$14.00 for 10; 6-8 ft., \$1.75 each; \$16.00 for 10.

GARDEN SEEDS

FALL PLANTING SEASON 1938

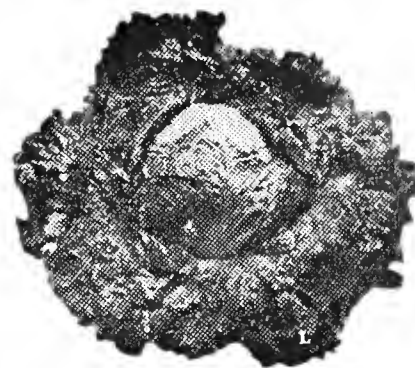

Why limit your garden to spring planting?

You can easily have a fine fall garden by planting beets, broccoli, cabbage, collards, carrots, turnips, kale, lettuce, mustard, onions, radishes and spinach. Send your order for seeds now and have them to plant when ready.

The Bountiful Ridge Seeds listed in this price list guarantee your garden the most accurately described, sure-to-mature vegetable and flower seed obtainable in seed form.

All seeds up to 10 pounds in weight are shipped POST PAID to any part of the United States unless otherwise stated. Give Bountiful Ridge Seeds a trial when you plant this year. They are Best by Test.

NOTE—Varieties given are partial list only—See general catalog for complete listings.

Send for Market Growers special price list on all seeds.

Market growers write for special seed list at low prices.

BUSH LIMA BEANS

Seventy to eighty days. Two lbs. plant 100-yard row.

Henderson's Bush Lima. Sometimes called Dwarf Carolina. Very early bush variety, of splendid quality and rich flavor. Very popular for canning. Pkt. 7c; ¼ lb. 15c; 1 lb. 35c.

Burpee's Bush Lima, (Improved). Larger and heavier than the original. Highly productive and mature a week earlier than the original. 2 oz. pkt. 8c; ¼ lb. 15c; 1 lb. 39c.

WAX OR YELLOW POD BUSH BEANS

Mature 50-70 days. Two lbs. plant 100-yard row.

Improved Golden Wax. Small erect plant, rust proof, yellow, fine home garden variety. Productive. 2 oz. pkt. 10c; ¼ lb. 15c; 1 lb. 40c.

Pencil Pod Black Wax. Absolutely stringless and very meaty. Best round podded wax bean. 2 oz. pkt. 10c; ¼ lb. 15c; 1 lb. 35c.

Sure Crop Wax Beans. Known as Bountiful Wax. Desirable for shippers. Flat Golden Yellow pods. Very early, stringless. 2 oz. pkt. 8c; ¼ lb. 15c; 1 lb. 30c.

GREEN POD BUSH BEANS

Mature 50-70 days. Two lbs. plant 100-yard row.

Giant Stringless Greenpod. Fine for canning. Wonderful quality, very early. For home or market. 2 oz. pkt. 7c; ¼ lb. 15c; 1 lb. 35c.

Bountiful. Important early variety. Long flat pod. Wonderful quality, prolific and absolutely stringless. 2 oz. pkt. 8c; ¼ lb. 12c; 1 lb. 35c.

Burpee's Stringless Greenpod. Plant large, matures early, fine quality, very productive, stringless. 2 oz. pkt. 10c; ¼ lb. 15c; 1 lb. 40c.

Tender Green. Dependable bearer, pods straight and meaty. Fine for market gardeners and canners. 2 oz. pkt. 8c; ¼ lb. 15c; 1 lb. 35c.

POLE or RUNNING BEANS

Mature 65-75 days. Three lbs to 100 poles.

King of the Garden. White lima. One of the best and most productive pole lima beans. Heavy producer, stands drought well. 2 oz. pkt. 8c; ¼ lb. 15c; 1 lb. 35c.

Carolina or Sewee. Small early variety of lima similar to Henderson only more prolific and of longer bearing. 2 oz. pkt. 8c; ¼ lb. 15c; 1 lb. 30c.

Kentucky Wonder. Most prolific of all pole beans. Good for home markets or canning. Stringless and tender. 2 oz. pkt. 5c; ¼ lb. 10c; 1 lb. 30c.

BEETS

Matures 45-60 days. Three ozs. plants 100-yard row.

Early Blood Turnip. Very hard to equal. Top shaped, early in maturity, deep blood red in color, very tender. ½ oz. pkt. 10c; ¼ lb. 30c; 1 lb. 90c.

Crosby's Early Egyptian. Extra early, flat in shape, mottled, bright red color. One of the best and latest strains. ½ oz. pkt. 10c; ¼ lb. 30c; 1 lb. 90c.

Detroit Dark Red. Best for truckers, shippers, or canning. Dark red color, free from strings, matures early. ½ oz. pkt. 10c; ¼ lb. 30c; 1 lb. 90c.

Mangel or Stock Beet. Matures 95-110 days. Three ozs. plant 100-yard row.

Mammoth Long Red. Very productive. Yields from 30 to 50 tons per acre. Fine food for cows. ½ oz. pkt. 10c; ¼ lb. 20c; 1 lb. 50c.

LETTUCE

Matures 50-70 days. (Header 2 oz. plants 100-yard row.

Black Seeded Simpson. Standard leaf American variety. Large crisp leaves, grows quickly. Pkt. 10c; 1 oz. 15c.

Early Silesian. Most popular of curled varieties. Fast growing. Pkt. 10c; 1 oz. 15c.

Big Boston. Fine header, high reputation with all truckers. Pkt. 10c; 1 oz. 20c.

Iceberg. Early maturing green variety. Very solid. Pkt. 10c; 1 oz. 15c.

MUSTARD

Matures 28-45 days. 4 oz. plants 100-yard row.

Giant Southern Curled. Most popular Mustard on the market today. Leaves large, yellowish green. 1 oz. pkt. 10c; ¼ lb. 25c.

Mustard Spinach. Mild mustard with a distinct Spinach flavor. Rapid grower, first cutting 3-4 weeks. Pkt. 10c; 1 oz. 15c.

ONIONS

Matures 88-130 days. 4 oz. plants 100-yard row.

Yellow Globe Danvers. Best early yellow, crisp and mild. Pkt. 10c; 1 oz. 25c.

Yellow Prize Taker. Large producer, 15 days earlier than Southport. Good keeper. Pkt. 10c; 1 oz. 25c.

Southport Red Globe. Very desirable main crop. Globe shaped, smooth glossy. Heavy producer, fine shipper and keeper. Pkt. 10c; 1 oz. 30c.

Silverskin. Best of all white Onions. Matures well, a good keeper and an all-round favorite. Pkt. 10c; 1 oz. 30c.

TURNIPS

Mature 40-80 days. 4 oz. sows 100-yard row.

Early Flat Red or Purple Top. Very early, white flesh, tender and mild in flavor. 1 oz. 10c; ¼ lb. 20c.

Early Flat White Dutch. Top small and strap leaf. Roots or bulbs are all white, flesh tender and tasty. 1 oz. 10c; ¼ lb. 20c.

Large Red or Purple Top White Globe. Large size, attractive in appearance. Most popular and largely used of all white varieties. 1 oz. 10c; ¼ lb. 20c.

Amber Globe. Finest of all yellow Turnips. Flesh is light yellow, fine texture. 1 oz. 10c; ¼ lb. 20c.

Rutabaga. Improved purple top strain, heavy cropper, flesh yellow with purple crown. Grown by market gardeners. 1 oz. 10c; ¼ lb. 20c.

Seven Top (For Greens). Used entirely for greens or salad, may be left to stand in the ground all Winter. Much in demand in Spring. 1 oz. 10c; ¼ lb. 20c.

CABBAGE SEED

Matures in 65-125 days. One oz. makes about 1000 plants.

Copenhagen Market. Early round head cabbage, excellent quality, very early shipper, fine grained and tender. Pkt. 10c; 1 oz. 25c.

Early Jersey Wakefield. The most popular of all early cone shaped head varieties. Standard everywhere. Valuable for home gardens. Pkt. 10c; 1 oz. 20c.

Early Flat Dutch. Successful everywhere, fine for Southern states for its ability to resist heat. Pkt. 10c; 1 oz. 20c.

Late Flat Dutch. Produces large solid weighty uniform heads. Best cropper obtainable. Pkt. 10c; 1 oz. 20c.

Danish Baldhead. Produces very solid good quality round head. Popular with market gardeners. Best for Northern latitudes. Fine for South. Pkt. 10c; 1 oz. 20c.

Marion Market. Yellows resistant strain, of Copenhagen Market. Earlier by ten days. Round head. Produces crop when others fail. Pkt. 10c; 1 oz. 40c.

CARROT SEED

Matures 60-80 days. Three ozs. plants 100-yard row.

Danvers Half Long. Extra fine strain, for home gardeners and shipping. Flesh orange-red, crisp and tender. Pkt. 10c; 1 oz. 15c.

Chantenay. Medium early, half long, red-orange color. Best for canning and table use. Pkt. 10c; 1 oz. 15c.

COLLARDS

Matures 80-90 days. One oz. plants 100-yard row.

Georgia or Creole. Plant and cultivate same as cabbage. Often used as greens. Pkt. 10c; ¼ lb. 25c.

CAULIFLOWER

Matures 90-130 days. ½ oz. plants 100-yard row.

Extra Early Dwarf Erfut. Fine earliest maturing known. Pkt. 10c; 1 oz. 65c.

Autumn Giant. Finest of all. Dense foliage, stiff heads, sow early. Pkt. 10c; 1 oz. 45c.

PARSNIPS

Matures 90 days. 3 oz. plants 100-yard row.

Hollow-Crowned Guernsey. Most popular and generally planted type. Pkt. 10c; 1 oz. 15c.

GARDEN PEAS

Mature 54-65 days. 4 lbs. sows 100-yard row.

Early Alaskan. Earliest pea grown, hardy and prolific. Peas small, round and tender. ¼ lb. 10c; 1 lb. 30c; 5 lbs. \$1.25.

Early Morning Star or First and Best. Very fine flavor, creamy, white seeded, extra early, highly recommended. ¼ lb. 10c; 1 lb. 30c; 5 lbs. \$1.25.

Early Bird. Very popular wherever grown. Pods large and well filled. ¼ lb. 10c; 1 lb. 30c; 5 lbs. \$1.25.

Gradus or Prosperity. Very large, tender quality, and prolific bearer. ¼ lb. 18c; 1 lb. 30c; 5 lbs. \$1.25.

Telephone. Large, wrinkled, and creamy green color. Very popular as late variety. ½ lb. 18c; 1 lb. 30c; 5 lbs. \$1.25.

OKRA or GUMBO

Matures 50-60 days. 6 oz. plants 100-yard row.

Long White Velvet Pod. Exceedingly productive, unusually long, smooth, green-white pods. Pkt. 10c.

PARSLEY

Matures 60-90 days. 2 oz. plants 100-yard row.

Fine Double Curled. Leaves finely cut and curled. Desirable for garnishing and drying. Pkt. 10c; 1 oz. 30c.

BROCCOLI

Matures in about 65 days. 1 oz. sows 100-yard row.

Early Italian. Plant much resembles Cauliflower. Very popular wherever known. Should be sown early in the Spring for July markets. A money-maker. Pkt. 10c; 1 oz. 40c; ½ lb. \$1.35.

KALE

Matures 30-50 days. 1 oz. of seed will sow 100-yard row.

Spring or Smooth Leaf Kale. Much planted for table greens, also feeding crop for hogs and cattle. 1 oz. 10c; ½ lb. 25c; 1 lb. 45c.

Dwarf Curled Scotch or Norfolk. Great favorite for garnishing. Foliage dark green, very finely curled and excellent variety. 1 oz. 10c; ¼ lb. 30c; 1 lb. 60c.

RAPE

Matures 6-9 weeks, 5 lbs. to acre broadcast.

One of the best plants for pasturing cattle, sheep and swine. Thrives best in cool weather. Plant in early Spring or late Fall.

1 lb. 20c; 10 lbs. \$1.75.

RADISHES

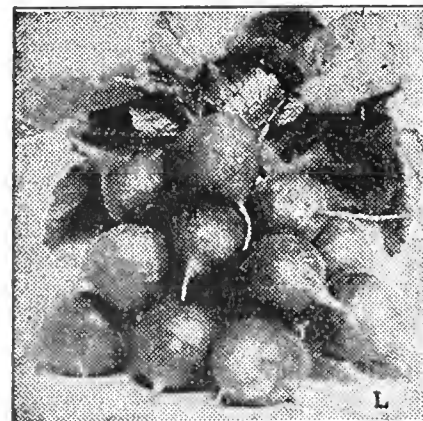

Mature 23-30 days. 4 oz. plants 100-yard row.

French Breakfast. Olive shaped half long radish, deep red shading to white at tip. Pkt. 10c; ¼ lb. 30c.

Early Scarlet Globe. Adapted for field or greenhouse. Very early, mild and tender. Pkt. 10c; ¼ lb. 30c.

Long Scarlet. Standard variety for home garden, roots long, crisp, and tender. Pkt. 10c; ¼ lb. 30c.

White Icicle. An early maturing long white radish of fine quality. Pkt. 10c; ¼ lb. 30c.

Hyacinths and Daffodils Blooming Together

DUTCH HYACINTHS

EXHIBITION SIZE BULBS

For growing in pots, on glasses, in window boxes or in the garden where very large, compact flowers are desired.

Gertrude. Deep carmine rose. Well-filled truss.
Grand Maitre. Porcelain blue. Gigantic truss.
King of the Blues. Finest dark blue. Excellent form.
La Grandesse. Purest white. Extra fine.
La Victoire. Brilliant carmine red. Large truss.
Lady Derby. Pure rose pink. Loose truss.
L'Innocence. Pure wax-like white bells.
Queen of the Blues. Light blue. Very large spike.
Queen of the Pinks. Clear rose pink. Large, well-filled truss.
Yellow Hammer. Creamy yellow. Compact spike.

Prices on above: 20c each; \$1.85 for doz.; \$12.50 for 100.

BEDDING HYACINTHS

For garden planting we recommend these medium-sized Hyacinths by color. Splendid bulbs that will bloom magnificently.
